

4th Asia Pacific Congress & Expo on Dental and Oral Health

Date & Venue July 27-29, 2015 Brisbane, Australia

(Theme: New Challenges to improve Dental & oral Health Care Globally)

Summary:

The science concerned with the prevention, diagnosis, and treatment of diseases of the teeth, gums, and related structures of the mouth and including the repair or replacement of defective teeth is Dentistry. The absence of active disease in the mouth. It affects overall wellbeing and enables people to participate in their chosen roles without discomfort or embarrassment. Oral health is a basic expectation of all Australians. Oral health and disease are important in their own right and for their association with general health. Dental amalgam, also known as 'silver fillings', have been used as a reliable, efficient, long-lasting and safe filling material for over 100 years.

Why Australia?

Dental caries is Australia's most prevalent health problem, edentulous the third most prevalent, and periodontal disease the fifth most prevalent. Caries and periodontal disease account for 90 percent of all tooth loss. At the last national survey of oral health, over 38% of Australians had untreated dental decay. More recent estimates suggest that 11 million people are suffering new decay each year.
