Importance & Scope:

Pain can protect us by forcing us to rest an injury or to stop doing something, the experience of being in a state of uncontrolled pain is horrible, frightening, and can have a profound effect on our quality of life. Uncontrolled pain can: delay healing, decrease appetite, increase stress, disrupt sleep, cause anxiety and depression.

Pain Medicine conference is a remarkable event which brings together a unique and international mix of large and medium medical and clinical research and diagnostic companies, leading universities and medical research institutions making the conference a perfect platform to share experience, foster collaborations across industry and academia and evaluate emerging innovations around the world.

This Pain Medicine conference brings together individuals who are interested in fields of Pain Medicine & Rehabilitation to discuss the involved basics in Pain Management & Rehabilitation, Physical & Physiological approaches in Pain management, Pain relief Analgesics, Interventional pain management, Cancer pain management as well as Novel Therapeutic approaches for pain management paving way to explore issues of mutual concern as well as exchange knowledge, share evidence and ideas, and generate solutions.

Pain Medicine-2015 aims to discover advances in health practices, management and education in relation to health disparities as well as the breadth of other topics. The conference will facilitate a series of discussions about state-of-the-art processes, organizational transitions, analytics, and technological innovations within the academia and industries related to Pain Management & Rehabilitation.

Why Chicago?

International conference and Exhibition on Pain Medicine will be held at Chicago, USA Conference city (Chicago) is a center for services, business, finance and is listed as one of the world's top ten Global Financial Centers.

This upcoming Pain Medicine-2015 meeting will bring together national and international thought leaders to cover pain management topics.

Conference Highlights:

- Basics of Pain Management and Rehabilitation
- Classification of Pain Relief Analgesics

- Physical and Physiological Approaches in Pain Management
- Interventional Pain Medicine
- Pain Syndrome
- Cancer Pain Management
- Pain Relief Therapies
- Chronic Pain Management
- Pain Management Medications
- Novel Therapeutic Approaches for Pain Management

Why to attend???

At Conferences, you will meet people who are interested in the same topic of research and discuss theoretical and methodological ideas. You will talk to participants about their own schools and departments, gathering information about places where you might eventually wish to work. Many presentations will inspire you with new ideas. All these experiences will help you feel as though you are an active, Knowledgeable, and valuable member of your professional field.

They are very appropriate in an era in which people do not have time to read a number of books by experts. They can spend a reasonably short period of time and get substantial information on a topic they have an interest in. The speakers, who specialize in these fields, have already done the sifting and selection of information from a wide variety of sources. They create learning communities that bring together delegates from like-minded companies

Glance at Market of Pain Medicine:

The future level of global spending on medicines underscores the similar challenges of access and affordability which face those who consume and pay for healthcare around the world. Alternatively, the fast growing of pharmerging markets will be driven predominantly by economic gains and rising income, particularly for the lowest earners, coupled with government commitments to support expanded access to basic healthcare services, which will make medicines more broadly available and affordable to millions of people. Developed markets will account for 57% of total spending, down from 73% in 2006. Statistic shows the market value of over the counter pain relief products in the United States in 2013, by outlet type. In that year, internal analgesic liquid pain relief products that were sold at multi-outlets in the United States had a market value of 390.3 million U.S. dollars. From 2006-2010 the global spending on medicine were found to be 658 (in billion dollars), 2011 the global spending's on market has been increased to 956 (in Billion dollars), whereas in future 2016 it is expected to be 1,205 (in Billion dollars) Pharmerging markets surpassed EU5 in total spending in 2010 and will reach 30% of global spending in 2016, as millions more people gain access to basic medicines.
