Frequency and risk factors of venous thromboembolism in Sidi Bel Abbes region, North West of Algeria

Nourelhouda Chalal

Djillali Liabes University, Algeria

Abstract
Venous thromboembolism including deep venous thrombosis and pulmonary embolism is a common disease associated with substantial morbidity and mortality.

In Algeria, VTE is becoming increasingly prevalent; however, there is no published data revealing its frequency and its associated risk factors. The purpose of our study was to determine the frequency, risk factors of this disease in Sidi bel abbes region, North West of Algeria. A retrospective study of patients hospitalized for DVT and/ or PE was carried out between January 1, 2006 and June 10, 2012 at the cardiology department of Sidi bel abbes university hospital. 183 VTE patients (71 men [38.7%, age 51.5 ± 17.7 years] and 112 women [61.2%, age 46.4 ± 17.9 years]) were included. Deep venous thrombosis (DVT) occurred in 146 (79.7%), pulmonary embolism (PE) in 37 (20.2%), 16 of them had associated DVT.

The most common risk factors among DVT patients were: immobility, hypertension, surgery and oral contraception whereas, immobility, surgery, hypertension and fractures were the most frequent risk factors among PE patients. 12.02% of patients had a previous VTE. 24.7% of patients had several risk factors. 97.5% of DVT were located in the lower limbs however, 2.5% were located in the upper limbs. In conclusion, venous thromboembolism is less common in Sidi bel abbes. However, adoption of an appropriate prophylactic strategy is required against the propagation of this disease.

Biography
Nourelhouda Chalal is a second year PhD student in Biology at Djillali Liabes University of Sidi Bel Abbes, Algeria. Her research interests focus on: epidemiological and pathophysiological aspects of venous thromboembolism and uterine fibroids. She has gained practical experience through internships in several medical laboratories, which have enhanced her knowledge and interest within these areas. Recently, she has contributed via an E poster in the international congress on Controversies and Updates in Vascular Surgery (CACVS) held in Paris between the 17 -19th January 2013.
