Program Announcement

Accommodation

A large number of rooms have been reserved. Discounted room rates for Oncologists 2018 participants are proposed. Only reservations made through the Conference will benefit these rates. The Congress Center can be easily reached by Public transportation.

Exhibition and Sponsorship

An Exhibition will be held concurrently with the Conference. The coffee break and lunch areas will be located adjacent to the booths. Thanks to exhibitors from all over the world, attendees will have a complete overview of new findings in the fields of oncology.

About Osaka

Japan is an archipelago in the Pacific region. It is separated from the east coast of Asia by the Sea of Japan. It consists of a great string of islands in a northeast-southwest arc that stretches for approximately 1,500 miles (2,400 km) through the western North Pacific Ocean. Nearly the entire land area is taken up by the country's four main islands; from north to south these are Hokkaido (Hokkaidō), Honshu (Honshū), Shikoku, and Kyushu (Kyūshū). Japanese economy grew very quickly and it serves as a major economic power in the world. Much of this growth resulted in increase in worker productivity. This higher productivity was due mainly to: increased capital (machines, etc.) per worker, advance in technology, a highly educated and skilled labor force, supportive government policies and a good world trade environment.

With a population of 127 million, a rapidly aging society, high per capita income, and a life expectancy rate of over 80 years, Japan represents a huge market for medical device manufacturers looking to expand sales in Asia. The medical device market size is estimated at \$31 billion, and it is projected to maintain a steady annual growth rate of 3% as the Japanese population continues to age. Japanese citizens still enjoy very long lives and a first class healthcare system, cancer represents a significant challenge for scientists and doctors. The Japanese government has taken deliberate steps towards addressing the rising rate of cancer, and medical device companies. Responding to growing worldwide demand, Japanese manufactures have been at the forefront of developing new types of cancer radiation therapy. Particle-beam radiotherapy the new treatment carries a smaller physical and financial burden on the patient, meaning it can be used by outpatients. . Japan has been a pioneer in the field of heavy-ion beam technology. Mitsubishi Electric, Hitachi and Toshiba are the world's only manufactures of treatment systems based on heavy-ion beams

Venue

Osaka, Japan

Important Dates

Abstract submission opens: *May 10, 2017*

Registration opens: *June 22, 2017*

Early bird registration: *August 15, 2017*

On spot registration: *May 24, 2018*
