On a daily basis we work with global pharma and biotech leaders with the aim to create digital-native Labs of the Future. Also, our experts are ready to share their experience and expertise.

I'm sure that the hot topic of Lab of the Future (the case study from our work) would be valuable for your audience and a great addition to the 10th International Conference on Biotechnology Research agenda.

TOPIC:
Case Study: Technologies that make Lab of the Future and drive collaborative innovation

Lukasz Paciorkowski
CEO
A4BEE, Warsaw, Poland

The drive to find new resources for innovation and process improvement in the life science industry is becoming more and more based on high-technologies. To face this challenge companies improve connection and collaboration between experts in life science, data science and digital technologies. By creating a digital backbone consisting of modular, scalable, flexible and easy to implement plug-n-play solutions, companies are already harnessing the power of the Lab of the Future.

Digital transformation that leads from new tech solutions, through collaboration and innovation to sustainable drugs development is on everyone's lips these days. But how data science, AI and IoT can really impact the Lab of the Future?

As a leader of a biotech company that implements technology software and hardware across global labs I'm ready to share my experience and let attendees embrace actionable outcomes.

Information about the speaker:

Lukasz Paciorkowski
https://www.linkedin.com/in/lukaszpaciorkowski/

A digital practitioner. Mr. Paciorkowski holds a Master's degree in Artificial Intelligence and is a co-author of multiple publications and one patent. His passion is to address real world challenges in pharma and biotech by creating meaningful innovative solutions.

A frequent speaker and university lecturer, who deals with the topic of Lab of the Future, flexibility, connectivity and scalability. In a very visual, unconventional, and sometimes provocative way, he encourages listeners to think outside the box and look at the technology topics from an unusual perspective. Before he created A4BEE, Mr. Paciorkowski worked at Accenture as Senior Manager and IoT Domain Lead and Executive Architect and Cloud Advisor at IBM.
