Fire in The Hole

Intestinal Permeability, The Development of Autoimmune Disease, and a Comprehensive Approach to Healing the Gut

Autoimmune diseases are a primary cause of morbidity and mortality in the industrialized world. That means it's in our offices every day. The number of people diagnosed with an autoimmune disease is increasing exponentially in our country. Estimates are that anywhere from 3 to 7 out of every 10 new patients coming into your office are suffering from an autoimmune mechanism (whether it has been recognized and diagnosed or not). The volume of information now of the underlying mechanisms that set the stage and contribute to the development of autoimmune disease is overwhelming.

Without recognizing and addressing the underlying mechanisms triggering the presenting complaints, the Practitioner may be proverbially 'chasing the tail' of the pathology with temporary symptom relief. The Practitioner who has a deep understanding as to when to suspect an immune reaction to an environmental trigger, has access to thorough testing tools, and who also understands and supplies comprehensive treatment protocols, that Practitioner will see results in their Practice like never before.
This Presentation will outline the Trilogy in the development of autoimmune disease and its musculoskeletal/neurological presentations with a deep emphasis on testing and treatment protocols that have consistently demonstrated dramatic results.

Objectives:

- Participants will learn the underlying mechanisms taxing the immune system
- Participants will learn the main environmental triggers that negatively affect the immune system
- Participants will learn the mechanisms in the development of the autoimmune spectrum
- Participants will learn which tests help to identify autoimmune conditions
- By the end of the presentation, participants will be able to outline the trilogy in the development of autoimmune disease
