WRONG METHODS OF LIPS CONTOUR PLASTY WITH

A AND E VITAMINS INJECTIONS AND THEIR COMPLICATIONS

Subject - hyaluronic acid - sulfide-free glycosaminoglycan composing in connective tissues and biological liquids.

The hyaluronic acid may be received by biotechnical synthesis too. wich use to solve problems incontour plasty of lips correction such us fillers

Nowadays contour plasty of the lips is becoming actual. There are performing lips shape change, volume increase and defect removal (so-called harelip, scars etc.) during the procedure.

many patients make there lips contour plasty with A and E vitamins injections wich have many complications.

Goal - unfortunately there are some problems related to the procedur to differentiate hyaluronic acid and vitamins A and E.

nowadays , for lips correction must use fillers with hyaluronic acid, because the obtained acid is clearing,drying and passing many chemical and bacterial researches. Such way obtained preparation are fillers with hyaluronic acid (hyaluronate) ,wich use to solve problems incontour plasty of lips correction and they are not neither toxic nor causing allergic or inflammatory reactions.

Material and Methods - There are patients who make subcutaneously injections with vitamin A and E.

After vitamin injection the first complications like allergic reactions, the skin is evidently swollen and tighten. palpation area is painless. recess is not performed during hand press, besides pacient has difficulties during talking. This simptoms are subcutaneously injected with vitamin A and vitamin E for lips correction. not hyaluronic acid.

Vitamin A and E are vitamins dissolving in fat,injecting only in muscles!

In cases the vitamins are injected in skin subcutaneous tissues, the preparation starts depositing and are toxicity.

Results – after fillers injection results are successful. lip gives good shapen and volume without complication. But after vitamin ijection there are some problems related to the procedur appearing like allergic reactions, swelling and hyperemia

Outcome-use only fillers with hyaluronic acid for lips correction!

Not vitamins, they are dangerous! To inject subcutaneously possible complications!
