

# Maxillary and Sinus Surgery-We Can Do Best as An Oral and Maxillofacial Surgeons

LUL LI
Department of Oral and Maxillofacial Surgery,School of stomatology, China Medical University, Shenyang, China 110002

Le Fort I osteotomy is one of the most frequently performed skeletal movements in orthognathic surgery. In 1868, David Williams Cheever performed and now known as a Le Fort I osteotomy, to expose and remove a large nasopharyngeal polyp. His published account described osteotomies 31 years before Le Fort's articles. My surgical experience fowllowed : 1.Resection of juvenile nasopharyngeal angiofibroma via Le Fort I osteotomy approach with endoscopy assistance. 2. Reconstruction of the frontal skull base and maxillary defect after ablative surgery to the nasal cavity and sinus. 3. Simultaneous repair of maxillary defect with CAD/CAM hollow denture obturator prosthesis after maxillectomy to the patients of maxillary sinus malignant tumor.

Biography

LU LI has completed his PhD at the age of 27 years from China medical University and postdoctoral studies from China medical University. He is the director of department of oral and maxillofacial surgery, the dean of school and affiliated hospital of stomatology China medical university. He has published more than 100 papers in reputed journals and has been serving as an editor in chief of Chinese journal of practical stomatology
