THE GOLDEN 72 HOURS: IMMEDIATE EXTRACTION AND BASAL IMPLANT PLACEMENT- A CASE REPORT

Dr. Ankita Chhabrani, MDS, JSS Dental College and Hospital, India
Dr. R. Sumukh Bharadwaj, MDS, JSS Dental College and Hospital, India

Abstract (300 word limit)

The poster aims to highlight a case report of partial rehabilitation in a severely periodontally compromised patient using two single-piece basal implants that were placed immediately after extraction and functionally loaded with a maxillary cement-retained fixed partial denture. The healing process was uneventful, and bone loss was measured at two points in time: right after implant placement and again after 3 months. Basal implants are versatile and can support single and multiple unit restorations in both upper and lower jaws, making them suitable for use in extraction sockets and areas with deficient bone height and width. In cases where unpredictable augmentations are needed, basal implantology may be a more effective approach compared to crestal implantology, especially in periodontally compromised patients.

Biography (150 word limit)

Dr. Ankita Chhabrani is a promising periodontist and oral implantologist currently pursuing her masters degree. Her journey into dentistry began with an innate passion for oral health.
During her postgraduate studies, her interest in basal implants blossomed, driving her to explore innovative techniques and cutting-edge research in the field.

Dr. Ankita's academic prowess is not her only forte. She is a shining example of a well-rounded individual, having actively participated in numerous dental conferences and symposiums. Her presentations and research contributions have garnered recognition, with being awarded the prestigious title of "Young Researcher of the Year" at one such conference. Her dedication and leadership abilities were further acknowledged when she was crowned "Best Student of the Year" in her postgraduate program.

Her ambition is to revolutionize the dental industry by the application of her skills and knowledge, while also advancing research, teaching, and patient care.
