Hi dear fellow colleagues,

I'm very honored by your invitation and would be very pleased to present a special topic regarding angiogenesis and bone reconstruction during implants surgery.
I'd like to introduce the:

«**PRF concept and use in bone regeneration during extraction/immediate implant placing and immediate loading on full arch reconstruction procedures** »

This communication will consist on presenting the PRF(platelet rich fibrin), how it works, how to make it, how to use it, what for, supported by more than 700 bibliography articles and many photos and videos of the procedure.
We'll put the emphase on all the factors that allow us to achieve beautiful and reproductive results such as:
biological factors (Vit D, cholestérol…)
management of the flap and sutures procedures
soft brushing technique to avoid periosteal incisions.
implant placement and torque contrôle
preparation of the flap to minimise ischemia induced by the surgery.
A clinical presentation of several surgical cases will be added in the second part of the conference showing it's predictible results through full arch reconstruction in one step.

If you're interested in such a conference I'd be glad to prepare the full presentation for this event.

Hope to hearing from you very soon.

kind regards.

Dr Jean-Fabien GRANGEON
DDS.
