Abstract

Diabetic Foot Ulcer (DFU) is a most serious, costly and devastating complication causing 85% lower limb amputation, 60% re-amputation, and 22% mortality in diabetes patients worldwide[1]. This study involves successful treatment of DFU (Fig 1a, 1b);only by externally sprayinga newly invented *Universal Potentiator* (UP) over 6 - 12 inches above the lesions. UPis an inorganic solution, solvent is water and filled in a rectangular spray (atomizer) container.During spraying, the ejected ions oscillate with each other and generate electromagnetic wave(EMW) which has energy level below 50 keV. Thus generated energy penetrates any organic and inorganic intervening media from skin, paper,… to metals, etc. This energy excites and re-arranges the altered bond parameters of diseased cells at once or gradually. Hence normal physiology and cure are restored. The energy possesses speed of light, so neither stored nor ionize the normal/pathological cells, but rapidly passes through and away[2]. The UP spray is easy to use (can be kept in pocket), non-toxic and highly economical (4 USD/300 ejections)[3].At present,the advanced instrumentation studies with biological cells are limited, hence the same spray technique, as an example of confirmation, was applied on icing sugar. FT-IR and 3-dimensional fluorescence spectra were done. The results (Fig2-4) showed the UP spray's effect in restoringand enhancing the natural characters. Also decreasing the natural character i.e., vice versa depending on the number of sprays given.Two sprays twice daily over the DFUdone and cure noticedin 21 days and amputation averted. This; our,*Holypathy* or *Potentiopathy,* in clinical trialsfound amazinglycuring various kinds of internal and external human diseases.

Chronic Diabetic Foot Ulcer:

Fig 1a On day 1

Fig 1b Cured on day 21 of UP spray treatment

FT-IR results:

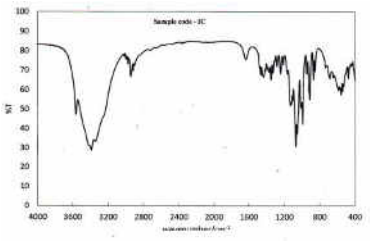

Fig 2a Non-sprayed – Natural taste

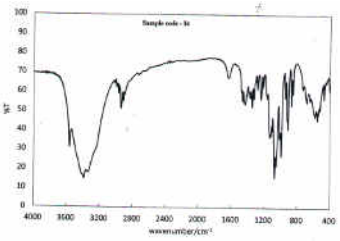

Fig 2b After 4 UP sprays – approx. 50% sweetness increased

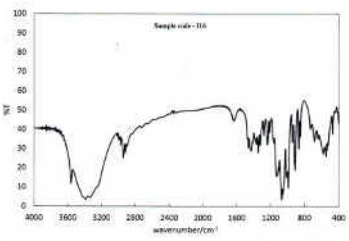

Fig 2c After 10 UP sprays – approx. 50% sweetness decreased

3D fluorescence spectrum results:

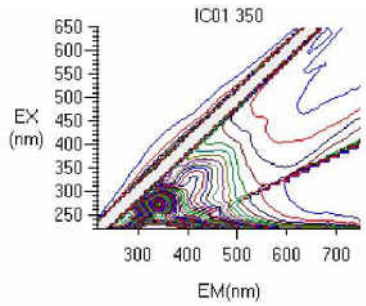

Fig 3a Natural sweet taste

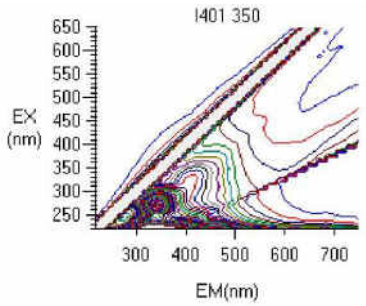

Fig 3b Approx. 60% sweetness increased

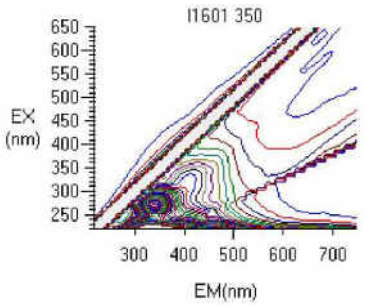

Fig 3cApprox. 70% sweetness reduced

Biography

Dr.U.Umadevi M.Sc., M.Phil., Ph.D., Assistant Professor of Botany in SFR college for Women, Virudhunagar, TN, India. **Specializations:** Published 41 research articles in National and International Journals. Editorial board member of Virology Research Journal and Biomedical Journal of Science and Technical Research. Reviewer in Research in Medical & Engineering Sciences. Co-authored a scientific book, "The Multiscience 22nd century inventions" (Publishers - Scholar's press, Germany) and also published book on divinity. Filed 9 patents.Received many central and state Government scholarship and grants.Recipient of awards, fellowships, prizes from Government and private organizations. Presented papers in national and international conferences**.** Chaired the International conference, organized by World Academy of Science, Engineering and Technology, London on 17th and 18th October, 2016 and got best paper award. Received Alexander Flemming Award from USA.**Research interests:** Recently undertaking research in Atomic, Molecular and Radio chemistry – *The Potentiology.*
