Plastic Reconstructive and Aesthetic Surgery Hand and Burn Surgery UH IBN SINA RABAT MOROCCO

Abstract:

This is a new technique that we are developing in our department of plastic reconstructive and aesthetic surgery UH IBN SINA RABAT as an alternative to conventional abdominoplasty techniques.

In fact, we combine a liposuction by VASER with a diastasis cure with an endoscopy approach to reproduce a scarless abdominoplasty.

We received a patient who complains after her pregnancy of a weakness sensation of her abdominal wall associated to a moderate umbilical skin excess.

The classic indication in these patients is a abdominoplasty without transposition of the umbilicus.

Eager for a procedure without scars, she was the perfect candidate for our technique.
