MARKET ANALYSIS

The global market for stroke disorders and treatments is rapidly expanding. The increasing number of people with high blood pressure is a major factor driving the growth of stroke disorder and treatment. Ischemic stroke is caused by a disruption in the blood supply to the brain caused by emboli, thrombus, or atherosclerosis in the cerebral arteries. According to the World Health Organization (WHO), approximately 17 million people die each year as a result of cardiovascular diseases. According to the Centres for Disease Control and Prevention, ischemic strokes account for approximately 87% of all strokes. Furthermore, stroke kills one out of every twenty people and costs the United States approximately $34 billion per year. Higher stroke mortality rates highlight the urgent need for new drugs and diagnostic tools.

Large patient pools and a concerning rise in the population at a higher risk of developing stroke in the near future are the two major factors driving the growth of the acute ischemic stroke diagnosis and treatment market. The rising prevalence of diabetes, as well as heavy tobacco users and an ageing population, are significant factors influencing market growth.
