MARKET ANALYSIS

Ear, nose, and throat (ENT) devices are special equipment used for detection, treatment or surgical procedure of any condition related to the ear, nose or throat. They also refer to artificial materials and prosthetic devices used to restore any dysfunction of the ears, nose and throat or any problems with hearing, smelling or speaking.

Minimally invasive surgical techniques involve the use of advanced and thin ENT devices in nasal, ear, and throat. The popularity of these types of surgeries is increasing because they are associated with minimal tissue damage, a quicker recovery, less irritation, and less scarring. ENT instruments available in the market are endoscopes, hearing aids and implants, handheld surgical devices, balloon dilation devices for sinus, CO2 lasers, image-guided surgery systems, ear tubes, and voice prosthesis devices.

Global ENT devices market was valued at €12.37 billion in 2022, and is expected to reach €21.36 billion by 2025, growing at a CAGR of 8.1% during the forecast period.
