MARKET ANALYSIS

From 2023 to 2030, the size of the worldwide petrochemicals market, which was estimated to be valued at USD 556.09 billion in 2022, is predicted to increase at a CAGR of 6.2%. The demand for downstream products from numerous end-use industries, including the construction, pharmaceutical, and automotive sectors, has increased, and this is one of the key market drivers.

The foundation of an industrial economy is petrochemical production, which is essential to numerous industrial operations. Tires, industrial oil, detergents, and plastics are a few items made from petrochemicals. The products have a crucial component in the production of consumer goods is plain plastic.

With a market share of nearly 40% in 2022, ethylene dominated the industry. This is linked to a rise in ethylene consumption across a number of sectors, incorporating construction packing over-the-road transportation and course of the projected period, it is anticipated that the demand of ethylene in emerging economies like India, Brazil, Vietnam, and Thailand will increase due to the countries' rapid modernization and robust automotive and packaging sectors. Increased consumption of polyethylene, HDPE, and LDPE is anticipated to support the market's overall expansion for petrochemicals.
