About PULSUS

Biotechnology is technology or set of techniques based on biology - biotechnology harnesses cellular and bio molecular processes to develop products and technologies that help improve our lives and the health. It includes manipulation of organisms on the molecular and genetic level to improve health, safety, nutrition and environment .Biotech is helping to heal the world by harnessing nature's own toolbox and using our own genetic makeup to heal the genetic diseases. In Current Scenario there are more than 250 biotechnology health care products and vaccines available to patients, many for previously untreatable diseases. More than 13.3 million farmers around the world were using agricultural biotechnology to increase yields of their farm and to prevent damage from insects, pests and reduce farming's impact on the environment. Modern biotechnology provides breakthrough on products and technologies to combat debilitating and rare diseases, reduce our environmental footprint, feed the hungry, and use less and cleaner energy, and have safer, cleaner and more efficient industrial manufacturing processes.

Recent advances in biotechnology are helping us prepare for and meet society's most pressing challenges and the ways to rectify it
