30 YEARS OF EXCELLENCE IN MEDICAL PUBLISHING

Cancer is a disease in which cells grow abnormally and have the potential to spread to different parts. The abnormal growths without being harmful are called the benign tumors or the non-cancerous growths. Those cells which divide uncontrollably and spread to the nearby tissues are called the malignant tumors or the cancerous growths. The spread form the primary site (the place it originated) to the secondary site is called metastasis. The causative agents of cancer are called carcinogens. There are different types of cancers named based on their origin of development. These days many advancements have come in the field of cancer starting from diagnosis, treatment and prevention.

Osaka is a large port city and commercial center situated at the mouth of the Yodo River on Osaka Bay in Japan. The modern architecture, nightlife and tasty street food are its major highlights. The 16th-century shogunate Osaka Castle is its main historical landmark. Osaka has also been known as the "nation's kitchen" as it served to be a center for rice trade during the early 16th century. The city has many attractions like Universal Studios a popular theme park, an impressive Osaka aquarium, the historical Osaka Castle, the oldest Shitennoji Temple, Sumiyoshi Taisha the headshrine, Abeno Harukas the tallest skyscraper, beautiful Minoo Park that connects people directly with nature and many more.
