Chemistry is a knowledge domain composed of atoms, elements and molecules their composition, structure, attributes, demeanor and the changes they experience during a reaction with other compounds. Chemistry is called the "Fundamental science" because it connects other sciences such as Biology, Physics, Polymer Science, Industrial Science, Material science, Geology and Environmental Science. It sympathize the importance of everyday. The biochemical changes that are exploited in our body by the intake of water as well as food is revealed by this vital Science. The Scope of Chemistry lies in both elemental and practical scientific field of study at a profound level as it occupies an intermediate position between physical science and biological science. Chemistry is considered to have become an established science with the work of law of conservation of mass that demanded quantitative observations of chemical phenomena. Similarly various fields of Chemistry has been developed and hence this conference would be worth attending.
