MARKET ANALYSIS

Chronic Kidney Disease (CKD) impacts about 14% of people worldwide, with many more at increased risk, highlighting the urgent need for advancements in nephrology. The high number of kidney transplants—approximately 121,678 each year—demonstrates the critical need for innovative solutions in this field. The global nephrology devices market, valued at $12 billion in 2018, is expected to grow to $16 billion by 2026, reflecting a 4.0% annual growth rate. This increase is fueled by advancements in renal replacement therapies, a shift towards preventive and value-based care, and the growing adoption of digital health technologies. Nephrology 2024 will address these issues by bringing together experts from around the world to explore strategies for reducing CKD prevalence and enhancing patient outcomes.
