30 YEARS OF EXCELLENCE IN MEDICAL PUBLISHING

Virology is one of the rapidly emerging fields of biotechnology and microbiology which deals with the study of viruses and viral infections. Viruses are small microscopic particles that are incapable of reproducing on their own and depend on the host for their very survival. They are responsible for a variety of infections and diseases. Some of the viral infections are deadly and life threatening. However, recent research on virology has led to the development of antivirals and vaccines to treat and to prevent the infections. Virotherapy is one such method where viruses are used as therapeutic agents by reprogramming them for the treatment of diseases. A new application of Genetically Engineered viruses in nanotechnology has also been recently described.Over the last two decades the world has faced major burdens like HIV, HPV and presently these organisms challenge the researchers with latest outbreaks like EBOLA and Zika virus.
