MARKET ANALYSIS

The global Virology market is expected to reach USD 100.5 billion by 2028, growing at a CAGR of 5.7% from 2022 to 2028. The market is driven by the increasing prevalence of viral diseases, the growing demand for antiviral drugs and vaccines, and the rising adoption of advanced technologies for Virology research and diagnostics.

Key Market Dynamics

Increasing prevalence of viral diseases: Viral diseases are a major public health concern, causing significant morbidity and mortality worldwide. According to the World Health Organization (WHO), viral infections account for approximately 17% of all deaths globally. The increasing prevalence of viral diseases is driven by factors such as population growth, urbanization, and climate change.

Growing demand for antiviral drugs and vaccines: The demand for antiviral drugs and vaccines is increasing due to the rising prevalence of viral diseases and the lack of effective treatments for many viral infections. The development of new antiviral drugs and vaccines is a major focus of the pharmaceutical industry.

Rising adoption of advanced technologies: Advanced technologies such as next-generation sequencing (NGS) and CRISPR-Cas9 are transforming the field of Virology. These technologies are enabling researchers to better understand the biology of viruses and develop new diagnostic tools and treatments.
