

Title: From “Mother-Son” to “Parents-Children”: The Fallacy of Traditional Chinese Medicine

Name: Eric M. Hao
Acupuncture Centre for Intractable Pain (ACIP)
Taipei, Taiwan, ROC

Abstract

One of the fallacies in Traditional Chinese Medicine (TCM) theory is the "One mother generate a son" concept which unmatched the natural fact that, in most species, both genders are required to reproduce next generations. If TCM with a fundamental fragility is gaining global attention and achievements, it is difficult to measure the positive impact on academic and clinical advancements when a "father" is incorporated and formed the new "Parents-Children" relationship. By applying new theory and the treatment modalities derived from it, TCM practitioners and acupuncturists will be able to manage challenging cases such as numbness, neuropathy, intractable painful and functional disorders with immediate and consistent success.

Keywords: Acupuncture, TCM, numbness, intractable pain

Biography

Mr. Eric Hao is a licensed acupuncturist in the State of Texas, USA with a master’s degree in acupuncture and oriental medicine and NCCAOM certification. He was a dentist in Taiwan from 1990-2012.
