Updated 7-17

If u like start nursery don’t think “we want start nursery need more space Like 1 acre or 2 acre”

2 to 5 cents place enough your nursery, even we have perfect planning 1 cent can do nursery

Whether your business is big or small, you’re looking to increase profits

Backyard Nursery

A nursery can be started with just few hundred dollars and a few essentials

Two ways to produce a large number of plants in a smaller space like a Backyard are growing trees in pots or choosing compact plants varieties to Grow. Using standard two gallon pots, a modest backyard with only 1,000 Square feet of space can hold over one thousand plants. Compact plants Include bonsai also,

Tools

Hand tools when starting out wheelbarrow moving potted trees And multitude use square and round point shovel, rake and pruners

Water

To avoid wasting water

Use drip irrigation system save the water

Growing plants requires a dependable water supply

which can come from

Pond

River

well

Water Harvesting

Every single drop of rain water need to save
That's save for your farm when summer

Slow it down
Spread it out
Store it
Save it

Soil

A soil mix that both holds moisture and provides good drainage essential for high-quality healthy plant

Using a blend of topsoil

Containers

Readily available new or used plastic pots makes it easier to grow plants than grown in the ground

It’s a system that makes a lot of sense for a small plants nursery

If you have a growing space and a water supply , the other Essentials can be purchased at any time

Here’s How the plants growing business works in some steps

- Purchase plant’s seeds or seedlings
  - When you’re just starting out plans seedlings more sense because you'll have salable plant’s and profits

Propagate plants from cuttings

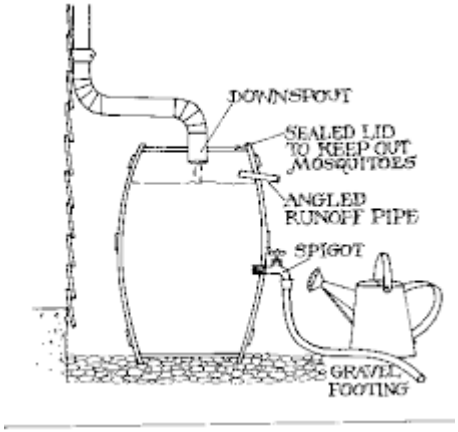

Some plant spp such as plants, are best started from softwood cuttings from mother plant

The cutting are stuck in a blend of sand and beat then misted until they are ready to transplant to pots

Marketing plants , when your plants are ready it's time to sell them

Landscaper's need to landscaping projects or mitigation projects
May require hundreds of plants

Save Money On Water

Water is a very important expense with any nursery

Even if you have a well , it costs money to pump the water out of the ground

Get a rain barrel. A rain barrel can be a great way to get free Water for your nursery

Not only is rainwater free , but it is completely natural

Use Mulching

If you we use mulch in your nursery it will serve to hold the moisture
The ground longer and keep it from drying out
Whether it is a pot with a plastic covering or plastic domes for pots the idea is to keep temperatures warm in winter and cooler and moister in summer.

Not only does it help to conserve water. It keeps weeds from sprouting

Space utilized nursery

Small space can grow to much more plants

Drip Irrigation

Hand-watering and overhead systems waste a lot of water," "Hand-watering can be helpful for some crops, but it is almost always inconsistent."

This is something , I only started using in the last few years , and I Imagine Gardening without it now. With drip irrigation, less water is wasted because The water is targeted.

If you use a sprinkler , you are watering a whole lot of surface area that Doesn't need to be watered. There will usually be a lot less weed growth Which is a great benefit .

The system takes some time to set up initially, but once it is installed, it can dramatically reduce the number of hours employees spend watering plants.

What Your Need Your Nursery

You probably already have most of the items in your nursery shed that you Need for propagation plant secateurs, sharp knife, Wheelbarrow, hoses and sprayers and pots

Propagating and potting mixes and hormone preparations.

Propagation media

Most of the Nursey propagators start off using commercial propagating Mixes

These are readily available from your nearest Hardware stores

Growing plants from seed

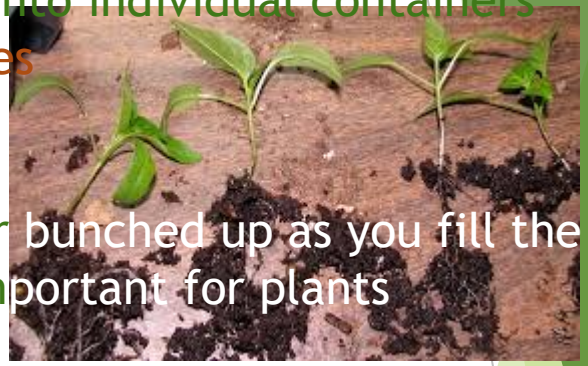

Watch out for fungal diseases these might appear as rooting steams
Small patches of dead seedlings and leafspot
They must be treated urgently

Disposal of infected trays before the infection spreads

Transplanting

The seedlings are transplanted picked out into individual containers When they have at least one pair of leaves

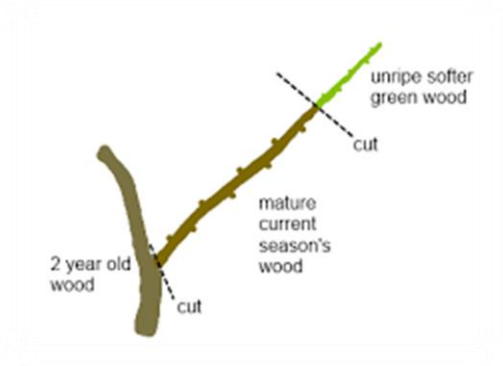

Try to ensure that roots are not twisted or bunched up as you fill the medias around the roots This is particularly important for plants They have strongest tap root system

Propagation by cuttings

- Many of the plants in your nursery can be reproduced by cutting.
- The most common type is the steam cuttings which is simply a Segment of stem containing several nodes.
- The cuttings are 5-15 cm long with lower cut made just below a node.
- Half to three quarters of the lower leaves are removed.
- Many semi-hard wood cutting will root in 1-3 month

Tips for Taking Cuttings

- Always Use sharp disinfected cutting tools (ie , Secateurs)
- Dip the base of the cuttings into a hormone preparation this helps speed up the rate of root ignition
- Take cuttings in cool conditions, and prepare them immediately, otherwise store them in cool, moist dark conditions

Ground Covers

With profits of up to some amount per square foot, it's easy to see why a ground cover nursery could provide you with the ideal in to your nursery crop. With today's high labor costs and water shortages, ground covers are becoming the smart way to landscape. Requiring no mowing, little maintenance and conserving water, ground covers can pay for themselves in a year or two. As a living mulch, they can also protect the soil from erosion and keep it cool and moist – reducing the need for watering.

If You Want to Sell Your Plants

The Main Option

Markets

Landscapers

Online

Email

Markets

You are largely selling to impulse buyers so you need to have
Plants. Which catch browser's attention in most cases plants with
Flowers will sell reading attractive or in active stall presentation
Can also draw buyers to have can look out your plants.
