ABSTRACT NAME

OLERICULTURE MIX FARMING BASED ON POND/TUB.

It's a new type of farming system which we near as beside pond/tank.

This type of farming we use a head pipe. Which we connect in ponds or tank.

This farming system we used sandy soil, because this soil have high sucking ability from which it irrigated by himself.

Near the pond or tank we use to do higher density planting of vegetables. And is this plavling vegetables it self nutrients through pond or water tank.

Because any water bodies, is rich in nutrients,

So there vegetables doesn't need any fertiliser, or we can say that we get organic vegetables, free of pesticide and

insecticide.

There vegetables will be highly nutritive.
