TITLE: **SOARING NANOFEVER ENGULFING DENTISTRY: BOON OR BANE**

DR. RIDHI CHAWLA

KOTHIWAL DENTAL COLLEGE AND RESEARCH CENTRE, MORADABAD, INDIA

Nano engineering is a mushrooming branch with which humans wish to create self-recapitulating creatures that walk around and even dream from mere inanimate ingredients. It has engulfed almost every field be it Nano medicine, Nano dentistry, Nano on the move, technology or rather Nano is in the air. It may sound fictitious now, but in the future, we dentists, will be replaced by microscopic machines called Nano assemblers. The state of nanotechnology today represents something of a PARADOX. On one hand, marketplace is flooded with products endorsing nanotechnology. While on the other hand, understanding of the underlying properties of Nano scale materials and structures is still at a rudimentary level with dawning fear of singularity where Nano machines will rule the human mind. Thus, it is rightly compared with a toy box of nature having the ability of creating limitless things. It's on how we use this toy box will determine humanity's tomorrow-Good or bad.

BIOGRAPHY

Dr. Ridhi chawla, MDS Orthodontics and dentofacial Orthopedics from Bapuji dental college and hospital, Davangere, Karntaka passed out in 2015 guided by DR.K.SADASHIVA SHETTY sir following which she has served as senior lecturer in the same for 2 years and currently working as the same in Kothiwal dental college and research Centre. She is a BDS topper with distinction in 6 subjects and has been a course instructor in no. of MBT fixed appliance workshops organized by Bapuji dental college and is a keen and enthusiatic speaker as well.
