DSP 2021 : Double Safety (DS) Protocol of RCT

Ibrahim Omar,Cairo University,Dental College,Egypt

Root Canal Treatment (RCT) is the last defense before decision of extraction . RCT is areal war between two Armies . The first is a Microbial Biofilm (our enemy) with its Weapons , . Microbial Biofilm is characterised by ; Mixed Microbes may be aerobic , anaerobic , fungi and even viruses , . Mutagenic enemy to produce a resistant generation of microbes . Reproducible irritant which is most important characteristic of micriobial inflammation .

The second Army is Dental Operator with thier Weapons . I will discuss in brief the all dentist weapons from a practicle point of view from A to Z through main concept of " STERILITY " with feasible , simple and updated sequences , approaches , techniques .,through DS protocol of work protocols . strating by diagnosis , prognosis prediction , proposed ttt planning , case openning, C&S and finally 3D OBT

Bi ography

Ibrahim omar graduated in 1993 from dental college , ciaro university . had finished his HDD in ENDODONTICS in 1998 from ciaro university then had completed MSc in 2007 from ciaro university
