OBESİTY İNCREASES YOUR RİSK OF SEVERE İLNESS FROM COVİD 19 RİSK

Authors :Nevin Borzan

ABSTRACT

Obesity is defined; as chronic and severe disease in developed and developing countries, affecting both adults and children disease. Coincident with the high rates of obesity, the prevalence of other chronic diseases.

Obesity has become a worldwide epidemic. The World Health Organization predicts that by the year 2015, 2.3 billion adults will be overweight (body mass index [BMI] ≥ 25) with 700 million being classified as clinically obese (BMI ≥ 30). Obesity has been linked to numerous health problems and chronic diseases, including type 2 diabetes, hypertension, dyslipidemia, certain cancers, and cardiovascular diseases.

The first human cases of COVID-19, the disease caused by the novel coronavirus causing COVID-19, subsequently named SARS-CoV-2 were first reported by officials in Wuhan City, China, in December 2019.

Keywords: obesity, covid 19, immun system, BMI
