Sir,

I have written an article about the following points

1. Mercury is the first planet of the origination of our solar system

2. CFC chlorofluorocarbons is not a reason for global warming also ozone layer hole does not effect earth's stability

3.Sun has surface force rather than gravitational force

4. About black holes in Milky way

5. Life in other planets

If you are allowing me...I am eager to share my thoughts as my own article

Thanks
