Life in Sun

1. There is a chance of living things in sun.
2. The sun is son of our grandfather..
That's why that rotates in a circular path.
3. If sun gets off it would become a planet... surely it would not swallow Mercury and Venus.
4. Our solar system would be adopted by father of sun.
5. Since helium is not reactant gas...inside sun there is a chance of living things.
6. Outer surface temperature of sun because of lightning due to equal protons and electrons in hitrogen and helium
