

Title: Management of intravascular filler injection , A Clinical Case presentation

Name: Dr Tan Huey Shin
Regen Clinic , Penang, Malaysia.

Dermal fillers have been increasingly used in minimally invasive facial aesthetic procedures. This widespread use has led to a rise in reports of associated complications. The aim of this presentation is to describe adverse events associated with dermal fillers and to provide clinical guidance on the acute management of intravascular filler complication.

Plastic and Reconstructive Surgery – Global Open: April 2019 - Volume 7 reported A total of 190 cases of blindness due to soft-tissue fillers were identified, of which 90 (47%) cases were attributed to autologous fat, and 53 (28%) cases were caused by HA. The rest of the cases were attributed to collagen, calcium hydroxylapatite, and other fillers.

Step by step methodology of clinical resolution of intravascular filler injection events following a quick diagnosis for minimal complication & damage control.

1. Immediately stop treatment
2. Massage the area
3. Apply heat
4. Tap the area
5. Inject with hyaluronidase
6. Apply nitroglycerin paste
7. Aspirin
8. Antibiotics
