

Title: Conjoined twins in a monochorionic triplet pregnancy , A Case Report

Name: Enyew A[1], Eyaya M[2]

1. Final year post graduate student in obstetrics and gynecology, College of Medicine and Health Sciences, Bahir dar university, Bahir dar, Ethiopia
2. Assistant professor of obstetrics and gynecology, Department head of obstetrics and gynecology, College of Medicine and Health Sciences, Bahir dar university, Bahir dar, Ethiopia

Introduction: Monozygotic triplet pregnancy is rare, occurring in approximately 4 in 100,000 pregnancies. More over the presence of conjoined twins in triplet pregnancy is very rare occurring in approximately one in a million deliveries.

Case report: We present female thoracopagus conjoined twins and another female triplet born to 25 yrs old Para II mother who delivered through cesarean section following spontanous conception. The conjoined twins underwent succesful separation surgery on the second post natal day. The diagnostic procedures, patient followup and outcome will be discussed in detail during the presentation

Conclusion: Conjoined triplet pregnancy following spontanous conception is very very rare.
