Five Generic Qualities (5 Qs) of Medical and Nursing Treatment

Its well known that nursery is an important component of the health care delivery system. Any drop in the quality of nursing will lead to impairment in health care quality.

The ***communication and integration*** period between the patient and the nurse is much longer than the communication and integration with the ***treating*** physician. The instruction regarding the medical ***process***, critics of medicine and postoperative care is mostly a nursing activity.

The public health nurse deals with a large segment of the society, they represent the major work force in primary health care, material and child health center, and well baby clinic. They supervise and deliver a large number of nursing activities including the health and nutrition education of the recipients.

With the expansion of the health care delivery in some countries, there is an urgent need to upgrade the capabilities of the nursing staff. A newly graduated nurse will gain experience through an ***infrastructure*** practicing in a hospital or health center. However this would never upgrade the knowledge especially with the new and recent development in nursing techniques and methodologies.

The public health nurse who is in continues contact with mother and children in health care delivery centers require special ***atmosphere*** and attention as they are dealing with a large segment of the population. Training program offered to those nurses are quite limited and there is an evident need to train them in subjects related to the quality of the object-Q1 (medical treatment itself), quality of process-Q2 (how the treatment is conducing), quality of infrastructure (Q3), quality of communication (Q4) and quality of atmosphere (Q5).

The main objective of the paper is to ensure that the healthcare nurse have the needed qualifications and elements to assure high quality care and patient safety. The 5 qualities model includes tools and techniques in all aspects related to the daily activities practiced in primary healthcare. The paper will propose news techniques and methodologies with intention to upgrade the quality of performance of the public health nurse is the institutions providing health care which will be ultimately reflected on the health status of the recipients of the health services.
