**Abstract :**
Adolescence is the period when different Physiological changes occur in both girls and boys . These Physiological changes have impact on body and mind . Different hormonal changes take place. Usually it is adapted in most of the Adolescents but in some others it may develop some problems which are actually Psychological in most cases .
Psychological problems like Cognitive Disorders , Affective Disorders , Eating Disorders , Addiction , Anxiety Disorders , Sexual problems etc. may start .
Adolescence is the period of overall change in life style , education etc.
Parents become very much protective towards their children and over-protection also causes different behavioural problems .
Social stigma becomes obstacle for proper diagnosis and treatment .
This creates a social as well as personal problem for the affected adolescents irrespective of socio-economic class .More awareness is required to overcome .
