7th World Congress on Addictive Disorders & Addiction Therapy

JULY 16-18, 2018 LONDON, UK PARK INN BY RADISSON HOTEL & CONFERENCE CENTRE LONDON, UK

Exploring the innovative ideas and remedy solutions for Addiction Disorder

Title: Different treatment approaches for compulsive or impulsive comorbid constellations on dual diagnosis patients with hypersexuality, alcohol/substance-related problems, and other mental health disorders

Dr. Isabel Nino-de-Guzman
Psychologist, CSAT- CMAT Supervisor
The Meadows Arizona, USA

Dr. Isabel Nino-de-Guzman is a clinical psychologist from Peru, where she was involved in academia as a full professor and researcher at The Pontificia Universidad Catolica del Peru. She is author and co-author of several papers on reputed journals. She has worked for renowned treatment programs for addiction treatment in the United States, including Pine Grove and Hazelden Foundation. Dr. Nino-de-Guzman conducted the first study utilizing latent cluster analysis to identify patterns of interaction between sexual addiction, mental health disorders, and maladaptive personality patterns. She currently works as Clinical Psychologist and Clinical Supervisor for Gentle Path at The Meadows in Arizona

Title: Maintaining the recovery post addiction.

Rukhsana Khan
Metanoia Institute, UK

Principles of Transactional Analysis in strengthening individual's 'Adult' behavior. The 'Adult' self is characterized by practical thinking and reasoning i.e. living in the here and now. It deals with analyzing, problem solving and decision-making skills of an individual. By strengthening the 'Adult', this will enable the former addict to perform and integrate more successfully within the personal and social settings of their lives.

Title: Impact of community-based Prevention Awareness Group (PAG) on Substance Use disorder: A Randomized Controlled Trial

Neha Sharma, PhD
Warwick Research Services, UK
NMP Medical Research Institute

Substance Use Disorder has been showing a rising trend all over the world including India. The project tested whether an Integrated community wide effort of Prevention and Awareness Groups (PAG) to manage substance use would have a greater effect on treatment attendance and drug abstinence than a de-addiction program alone.

Title: INFLUENCE; DRUGS; STUDENTS PERFORMANCE; QUALITATIVE STUDY; UNIVERSITY STUDENTS

Asif Mubeen
Chief Executive
Devotion Rehab Centre

Abstract the Influence of Drugs on the Performance of Students is describing the effects of drug abuse on the students in nationally representative institutions especially universities of Pakistan. Current research is elaborating the various aspects of drug abuse searches by institutions and reported drug usage by students. There are difficulties in the eradication of drug abuse which are notwithstanding, but one can and must bridge that informational gap, if one really wants to be successful in controlling drug addiction. It is the demand of time to bring science and facts before the ideology to make our youth strong and healthy from physical and mental point of view. It is important that early findings must be validated by high-level evidence studies. Keywords: INFLUENCE; DRUGS; STUDENTS PERFORMANCE; QUALITATIVE STUDY UNIVERSITY STUDENTS

Title: As A Rehabilitation Model in the Field of Addiction in Turkey:

Hakan Karaman
Research Assistant,
İstanbul University, Turkey

This study was planned to develop a basic critique of Yeşilay Consultancy Center (YEDAM), which is working in the field of addiction treatment and rehabilitation in Turkey. In this study, which was prepared as a case study from qualitative study methods, in-depth interviews, participant observation and document analysis were used from data collection techniques. In this sense, YEDAM model was examined from the administrative and institutional structure of the model up to the professional intervention stage; the collected data were interpreted thematically and proposals for the development of the model at the end of the study were presented

Title: Increasing Treatment Retention and Sustaining Recovery among Individuals with SUDs and AUDs via Competitive Employment

Stephanie L. Lusk
CRC University of Arkansas – Fayetteville

Competitive employment has proven a crucial factor in improving the rates of treatment retention and sustained recovery among individuals with substance and alcohol use disorders. However, rates of unemployment and underemployment remain especially low for this group. Addiction professionals generally identify employment as ancillary and secondary to the work involved in treatment, and as such, are less apt to seek out and use employment services that could very well increase the likelihood of identifying, obtaining, and maintaining a job. Employment is a principal goal in treatment plans; therefore, employment specialist and treatment professionals should work in tandem to assist in the realization of this goal.

Title: What constitutes problematic khat use? An exploratory mixed methods study in Ethiopia

Awoke Mihretu
Addis Ababa University

Khat is a psycho-stimulant herb, which has been in use in traditional societies in East Africa and the Middle East over many centuries. Although khat is reported to cause various health problems, what constitutes problematic khat use has never been systematically investigated. This study explored the acceptable and problematic uses of khat from the perspective of users.

Title: First Meta-Ethnography of Methamphetamine Relapse & Recovery

Samuel Brookfield
University of Queensland, Australia

Methamphetamine addiction remains a grave and novel public health concern internationally. Methamphetamine-related morbidity and mortality has escalated rapidly in recent years. In the field of healthcare, this has been met with minimal innovation or expansion in methamphetamine-specific treatment services. Relapse rates after inpatient rehabilitation episodes can be as high as 90%. Research regarding methamphetamine addiction therapy is diasporic and fragmentary. There is a critical need, therefore, to summarize and integrate the available evidence, and provide a basis for the direction and prioritization of future research areas, and intervention design.

Title: Role of Spiritual Therapy in Motivation & Rehabilitation in Substance Use Disorders.

Dr. Sarfraz Hussain (MBBS,MCPS)
Punjab University & College of Physicians and Surgeons

Spirit, heart and mind explain the phenomena of behavior change. Spirit is symbolic of God, heart is a place of worldly achievement while mind is our behavior regulator. To control our body two forces are acting on us. Devine power and devil power: divine force results in a good outcome while devil force results in a bad outcome. Examples of bad behaviors are crime, gambling, drug addictions, alcoholism, drug trafficking and other crimes associated with it. If I talk about spiritual blessings it can bring a good change, gentle behavior and a drug free life

Title: Drinking, Drug Use and Addiction in the Autism Community

Elizabeth Kunreuther
UNC Department of Psychiatry
USA

Studies suggest individuals with autism spectrum disorder (ASD) have a higher risk of developing substance use disorder (SUD) than the general population. Currently, 1 in 68 individuals is diagnosed with ASD. Adult outcomes for those with ASD are poor. The presentation provides an overview of ASD in adolescents and adults, common misconceptions regarding independent adults with ASD such as a disinterest in alcohol/drugs, an aversion to social environments where

Title: Do dopamine transporter predict the risk of cognitive impairment

San-Yuan Huang
President of Taiwanese society of addiction

Dr. San-Yuan Huang graduated in medicine at the National Defense Medical Center, Taipei, Taiwan, ROC. His academic research focuses on gene-gene, and gene-behavior-environment interaction in substance use disorders such as alcohol dependence, depressive alcoholism and other illegal drug abuse. After Ph.D. degree, he main academic interests/ research are in gene, brain image with SPECT and PET, psycho-immunology in addiction and mental related disorder. Currently Dr. Huang is the president of Taiwanese society of addiction (TSA). He is active in addiction services, particularly in the rehabilitation of addictive patients and promotion of mental health in the addiction.

Title: Alcohol and Substance Use Knowledge, Attitudes, Subjective Norms, Self-Efficacy, Perceived Behavioral Control, And Behavioral Intentions Among Omani College Students

Muna Shaaban Bait Ajzoon
Old Dominion University, USA

Muna Shaaban Bait Ajzoon has completed her PhD in health services research from Old Dominion University, USA in 2017. She is the dean of Nursing college, Ministry of Health Oman. She also has more than 12 years nursing teaching experience and more than 5 years' leadership and management experience.

Title: Impact of Childhood Trauma On Comorbidity Among Alcohol Dependent Patients: Controlled Study

Dr. Demet Güleç Öyekçin
Çanakkale Onsekiz Mart University
Faculties Psychiatry AD

A total of 61 participants were assessed; 35 treatment-seeking alcohol dependent patients and 26 age-gender matched controls in the Addiction Division of Psychiatry Department of Çanakkale Onsekiz Mart University. After describing the study and obtaining informed consent, participants were assessed with demographic questionnaires, followed by the Structured Clinical Interview for the DSM-IV-TR and Childhood Trauma Questionnaire (CTQ

Title: Emotional disturbances are a central characteristic of many mental disorders, including alcohol addiction.

Atila Gürgen
Faculty of Medicine
Mental Health and Diseases
Çanakkale Onsekiz Mart University

Thirty-three treatment-seeking AUD individuals were recruited from addiction division of psychiatry department of Çanakkale Onsekiz Mart University. Patients who agreed to participate in the study and completed detoxification treatment were enrolled to the study. After describing the study and obtaining informed consent, participants were assessed with demographic questionnaires (including questions such as age, gender, income status, duration of alcohol use, amount of alcohol use, duration of abstinence were given to participants.) followed by the semi-structured interview. Emotion regulation was assessed with the difficulties in emotion regulation scale

Title: DIAGNOSTIC ACCURACY OF CANNABINOID TESTING BY LIQUID CHROMATOGRAPHY-TANDEM MASS SPECTROMETRY IN HUMAN HAIR

Alveena Younas
Armed Forces Institute of Pathology (AFIP)

Dr. Alveena Younas completed her MBBS in 2009 from Army Medical College Rawalpindi and got her degree from National University of Science And Technology(NUST) with distinction. Presently she is in her second year of post graduate training in Armed Forces Institute Of Pathology(AFIP) ,Pakistan in subject of Chemical Pathology. She has great interest in proteomics and new analytical techniques being developed in field of chemical pathology

Title: Early trauma, coping, perceived social support and self-efficacy in adults addicted to substances

Diana Laura López Navarro
Herlinda Aguilar Zavala
University of Guanajuato Celaya-Salvatierra

Diana Laura López Navarro has been completed her undergraduate studies at the age of 22 from the University of Guanajuato, one of the best public universities in the country and the best in her State. Since then, as a clinical psychologist, the area of addiction research has been the line for which she has begun to develop professionally, collaborating in the University's Molecular Biology and Behavioral Genetic Laboratory, and developing a thesis whose protocol has been supported by the Guanajuato's Ministry of Health for its contribution in the matter of addictions

Herlinda Aguilar Zavala is clinical psychologist, she has completed his PhD in Medical Science at the age of 31 from the University of Guanajuato. She oversees the University of Guanajuato's Molecular Biology and Behavioral Genetic Laboratory. She has been published more than 10 papers in JCR journals. She has been published two books about addictive disorder. She is Titular Professor and Researcher in the University of Guanajuato.

Title: Perceived parental rearing behaviour and executive functions in adolescents with drug-addicted parents

Diana Lizbeth Arteaga Cruz
University of Guanajuato

Diana Lizbeth Arteaga Cruz, studied clinical psychologist in University of Guanajuato, is doing her thesis in the project "Perceived parental rearing behavior and executive functions in adolescents with drug-addicted parents" in the Molecular biology and behavioral genetic laboratory.

Title: Stroop Interference and 5HTTLPR polymorphisms between heavy smokers

Herlinda Aguilar Zavala
Health Sciences and Engineering, psychology,
Campus Celaya Salvatierra
University of Guanajuato

Herlinda Aguilar Zavala is clinical psychologist, she has completed his PhD in medical science at the age of 31 years from Guanajuato University. She oversees Molecular biology and behavioral genetic laboratory of Guanajuato University. She has published more than 10 papers in JCR journals. She has published two books about addictive disorder. She is Titular Professor and Researcher in the Guanajuato University.

Title: Comparison of EEG patterns between internet gaming disorder and healthy control group.

Laehyun Kim
Korea Institute of Science and Technology
Korea University of Science and Technology

Laehyun Kim received his PhD from University of Southern California, USA in 2003. He is a principal researcher at Center for Bionics, Korea Institute of Science and Technology and a professor at the department of HCI and Robotics, University of Science and Technology, Korea. He was a visiting scholar at the department of Radiology, Harvard University.

Title: Association of Adiponectin 1 and 2 receptors expression and opioid addiction

Maral Haghnegahdar
pharmacology group shiraz
university of medical sciences

Maral Haghnegahdar has completed his pharm D at the age of 25 years from Shiraz University of medical sciences and She works as Research Assist at shiraz university of medical sciences. She has worked on this title for her PharmD thesis.

Title: Antidepressant and anxiolytic effects of Mentha spicata essential oil against chronic co-exposure to lead and manganese during development in wistar rats.

Mostapha BRAHMI
Dr Moulay tahar saida University

Mostapha BRAHMI, Ph.D. researcher in biochemistry and experimental toxicology, University of saida Algeria, laboratory member of bio toxicology, pharmacognosy and biological recovery of plants.

Title: Cognitive Impairments Induced by Adolescent binge-like Ethanol Intoxication in Rats: Neuroprotective Role of Argan Oil

EL Mostafi Hicham
Laboratory of Genetic
Ibn Tofail University, Kenitra, Morocco

Adolescent alcohol binge drinking constitutes a major vulnerability factor to develop cognitive disorders. However, the pathways of treatment or prevention against this susceptibility remain less explored. Argan oil (AO), commonly used in traditional Moroccan medicines, is rich in oleic and linoleic acids, polyphenols, sterols, and tocopherols. This composition gives it numerous beneficial pharmacological effects of mental health

Title: Blood miRNA profiles in the Korean individuals with internet gaming disorder

Yeun-Jun Chung
The Catholic University of Korea
College of Medicine

Yeun-Jun Chung is a professor of medical genomics affiliated in The Catholic University of Korea, College of Medicine, Korea. Since he has completed his PhD (1989), he has studied genomics and informatics. Now, he is a director of Precision Medicine Research Center, Catholic Medical College. He has published more than 100 papers in reputed journals in diverse fields of medicine including cancer, complex disease, and neuropsychiatric disorders

Title: Clown Therapy: A dramatherapy approach to addictions.

JeffGordon,YoramShenar
Israeli

Jeff Gordon and Yoram Shenar are both drama therapists and therapeutic clowns, with backgrounds in community theatre and theatre respectively. They have developed a Clown therapy program that has been recognized by the Israeli Ministry of Social welfare (their home base) in the field of addictions. They have been working in this field, in day treatment centers, for the last eight years. They have taken part in a number of national conferences, introducing their work to a wide body of mental health practitioners.

Title: Reducing the Harm in Sex Work and Recovery

Stephanie Dixon Certified
Substance Abuse Counsellor
Carolina Treatment Center-Fayetteville NC, Southeastern Exchange
Liberty University

Stephanie Dixon is a Certified Substance Abuse Counselor, working with individuals with Severe Opioid Use Disorder, at Carolina Treatment Center of Fayetteville, where she has served for 4 years. She also instructs substance use counseling courses and a pharmacology course at Fayetteville Technical Community College for their Continuing Education Department. Recently she started as the Community Outreach and Education Coordinator of Sea-Ex, a non-profit in the Fayetteville area. Stephanie is also certified in Mental Health First Aid and has completed the state course on HIV education and counseling. She is the Syringe Exchange Coordinator at Carolina Treatment Center. Ms. Dixon has recently entered the Master's in Professional Counseling program at Liberty University.
