21st International Conference on

Advanced Energy Materials and Research

July 11-12, 2019

Zurich, Switzerland

SCIENTIFIC PROGRAM

DAY 1
Thursday, 11th July

08:30-09:00 **Registrations**

09:00-09:30 **Introduction**

09:30-09:50 COFFEE BREAK

09:50-11:50 Meeting Hall 01

KEYNOTE LECTURES

11:50-13:10

MEETING HALL 01

Talks On:

- Advanced Energy Materials
- Advanced Nanomaterials
- Hydrogen Energy and Fuel Cell Technology

13:10-13:15 GROUP PHOTO

13:15-14:00 LUNCH BREAK

14:00-16:00

MEETING HALL 01

Talks On:

- Solar Energy Materials
- Polymer Energy Materials
- Crystalline Porous Materials

16:00-16:20 COFFEE BREAK

MEETING HALL 01 (16:20-17:00)

Young Researchers in Advanced Energy Materials and Research

DAY 2
Friday, 12th July

09:00-10:30 Meeting Hall 01 — **KEYNOTE LECTURES**

10:30-10:50 COFFEE BREAK

10:50-12:50 — **MEETING HALL 01**

Talks On:

- Catalysis and Energy Materials
- Biomaterials for Energy production
- Advanced Graphene & 2D Materials

12:50-13:35 LUNCH BREAK

13:35-15:55 — **MEETING HALL 01**

Talks On:

- Batteries and Solid Electrolyte Materials
- Optical, Electrical and Magnetic Materials
- Energy Harvesting Materials
- Emerging Technologies for Energy Applications

15:55-16:15 COFFEE BREAK

MEETING HALL 01 (16:15-17:00)

Poster Presentations

Previous Organizing Committee

Jerzy A. Szpunar

University of Saskatchewan

Canada

Dequan Xiao

University of New Haven

USA

Leszek Adam Dobrzański

Silesian University of Technology in Gliwice Poland

Wei Li

University of Texas at Austin

USA

Mahi R. Singh

University of Western Ontario

Canada

Dongfang Yang

National Research Council

Canada

Yi-Lung Mo

University of Houston

USA

Haydn Chen

University of Illinois at Urbana-Champaign

USA

Hongwei Sun

University of Massachusetts Lowell

USA

Previous Organizing Committee

Rosa Cervera Sardá

Alcala University

Spain

Winfried Hoffmann

Freiburg and Constance University

Germany

Dequan Xiao

University of New Haven

USA

Hyoyoung Lee

Sungkyunkwan University

South Korea

Fuqiang Liu

UMass Lowell

USA

Muge Acik

Argonne National Laboratory

USA

Christopher Chao

The Hong Kong University

of Science and Technology

China

Zhifeng Ren

University of Houston

USA

Xiaoliang Wei

Pacific Northwest National

Laboratory

USA

PAST AFFILIATES

PAST AFFILIATES

Akira Ishibashi
Hokkaido University, Japan

Antonio Di Bartolomeo
University of Salerno, Italy

Bruce S. Hudson
Syracuse University, USA

Jerzy. A. Szpunar
University of Saskatchewan, Canada

Klaus D. Becker
TU Braunschweig, Germany

Olivier JOUBERT
University of Nantes, France

Xiaodong Li
University of Virginia, USA

Hyoyoung Lee
Sungkyunkwan University, South Korea

Dariusz KURPISZ
Poznan University of Technology, Poland

Fahad Al-Ajmi
Kuwait Institute for Scientific Research, Kuwait

Angelica Chiodoni
Italian Institute of Technology, Italy

Fouzia Achchaq
University of Bordeaux, France

Gang Chen
Shanghai Institute of Technical Physics, China

Guangqing Zhang
University of Wollongong, Australia

Krzysztof Wierzbanowski
AGH University of Science and Technology, Poland

Alessandra Fava
University of Rome Tor Vergata, Italy

Andrés Muñoz
University of Antioquia, Colombia

Ludek Frank
Czech Academy of Sciences, Czech Republic

Lin Wang
Shanghai Institute of Technical Physics, China

Maciej OBST
Poznan University of Technology, Poland

Marie Duquesne
Institute of Technology of Bordeaux, France

Il-Shik Moon
Sunchon National University, South Korea

Pavel Lazarev
Capacitor Sciences Inc., USA

Mustafa URGEN
Istanbul Technical University, Turkey

PAST AFFILIATES

PAST AFFILIATES

Laurence Noirez
Université Paris-Saclay, France

Alan J. Russell
Carnegie Mellon University, USA

Wojciech Olszewski
University of Bialystok, Poland

Haruo sugi
Teikyo University Medical School, Japan

Hikaru Kobayashi
Osaka University, Japan

Juhwan Lim
Agency for Defense Development, South Korea

Young Kwon Yang
Chung-Ang University, South Korea

Karl Ulrich Kainer
Helmholtz-Zentrum Geesthacht, Germany

Nekane Guarrotxena
Spanish National Research Council , Spain

Klaudio Bari
University of Derby, UK

Miloš Netopilík
Academy of Sciences of the Czech Republic, Czech Republic

Xiang Zhang
University of Cambridge, UK

Atsushi Kubo
University of Tokyo, Japan

Olga Barrera
University of Oxford, UK

Hitoshi soyama
Tohoku University, Japan

Michael Herman
Tulane University, USA

Tokiyoshi Matsuda
Ryukoku University, Japan

Ana senos
University of Aveiro, Portugal

Nikolay Gerasimchuk
Missouri State University, USA

Hideo Miura
Tohoku University, Japan

Denis Spitzer
NS3E Laboratory, ISL-CNRS-UNISTRA, France

Nuno M. Ferreira
University of Aveiro, Portugal

Natalie German
Technical University of Munich, Germany

Jeong-Woo Choi
Sogang University, South Korea

PAST AFFILIATES

PAST AFFILIATES

Geoffrey Mitchell
CDRSP-IPLeiria, Portugal

Masumi Saka
Tohoku University, Japan

Masashi morita
Panasonic Corporation, Japan

John Ekerdt
Univerisity of Texas at Austin, USA

Jolanta Romanowska
Rzeszów University of Technology, Poland

Jean marie dubois
Université de Lorraine, France

Bailleul Jean-Luc
Laboratoire de Thermocinétique de Nantes, France

Erwin Povoden-Karadeniz
Institute of Materials Science and Technology, Austria

Francesco Aliotta
Istituto per i Processi Chimico-Fisici, Italy

Ana neves
University of Exeter, UK

Andrés González-Hernández
Universidad Industrial de Santander, Colombia

Thomas Fiedler
University of Newcastle, Australia

Marta Muñoz Marti
CETEM, Spain

Aman Ullah
University of Alberta, Canada

Dmitry Volodkin
Nottingham Trent University, UK

Nuno Alves
CDRSP-IPLeiria, Portugal

Manfred Martin
RWTH Aachen University, Germany

Aitor Larrañaga Varga
University of the Basque Country, Spain

Simone Borri
Istituto Nazionale di Ottica, Italy

Paul Sermon
Brunel University, UK

Zahoor Ahmad
Kuwait University, Kuwait

Marta Prada
University of Hamburg, Germany

Pietro Cataldi
Italian Institute of Technology, Italy

Mark Whittaker
Swansea University, UK

Giti Khodaparast
Virginia Tech, USA

Gerd Kaupp
University of Oldenburg, Germany

PAST AFFILIATES

PAST AFFILIATES

Karolína M. Šišková
Palacký University in Olomouc, Czech Republic

Efrosyni Themistou
Queen's University Belfast, UK

Bing Lu
Wanhua Chemical Group Co. Ltd, China

Alexandre Maitre
University of Limoges, France

Marzia Quaglio
Italian Institute of Technology, Italy

Ilkay Demir
Cumhuriyet University, Turkey

Ho-Kei Chan
Harbin Institute of Technology, China

Julien vieillard
University of Rouen Normandie, France

Lau Sam
University of Edinburgh, Scotland

Mineo Hiramatsu
Meijo University, Japan

Jose Luis Pau
Universidad Autónoma de Madrid, Spain

Hiroyuki Aoki
Japan Atomic Energy Agency, Japan

Kanchan Mondal
Southern Illinois University, USA

Marco Laurenti
Politecnico di Torino, Italy

Sylvain G.Cloutier
École de Technologie Supérieure, Canada

Hans-Joachim Radusch
MLU Halle, Germany

Robert Huber
Max Planck Institute for Biochemistry, Germany

Satoshi Fujii
Tokyo Institute of Technology, Japan

Damia Mawad
University of New South Wales, Australia

Richard Weihrich
University of Augsburg, Germany

Alexander Korsunsky
University of Oxford, UK

Antonina Pirrotta
University of Palermo, Italy

Antonio Zuorro
University of Rome, Italy

Anna Baldycheva
University of Exeter, UK

21st International Conference on Advanced Energy Materials and Research

July 11-12, 2019 Zurich, Switzerland

AGENDA

Novel polyolefin-based proton exchange membranes for fuel cell applications

T. C. Mike Chung,
The Pennsylvania State University,
USA

Dr. T. C. Mike Chung is a professor of the Department of Materials Science and Engineering at Pennsylvania State University. He obtained his B.S. in Chemistry from Chung Yuan University (Taiwan) in 1976. In 1979, he came to US for his graduate study in the Department of Chemistry, University of Pennsylvania. After finishing his Ph.D work in 1982 on conducting polymers with Professor A. J. MacDiarmid (Nobel Laureate), he spent two years as a Research Associate at the Institute for Polymers and Organic Solids with Professor Alan J. Heeger (Nobel Laureate), University of California, Santa Barbara. In 1989, he joined the Pennsylvania State University, as an associate Professor. In 1992, he was promoted to Full Professor. He pioneered the research in synthesis of functional polyolefin using the combination of single-site metallocene catalysts and designed comonomers and chain transfer agents. In the past decade, he has been focusing on new functional polyolefin materials for energy storage and green environment applications. He has published 2 books, 235 papers, and 45 US and 10 international patents in polyolefin technology area.

Interfacial energy materials for flexible, safe batteries: gummy electrolyte and gummy binder

W.H. Katie Zhong,
Washington State University,
USA

Dr. Zhong currently is an endowed chair professor, Westinghouse Distinguished Professor in the School of Mechanical and Materials Engineering at Washington State University in the US. Her research interests include polymers, nanocomposites for energy and environment applications. Dr. Zhong received numerous awards/honors including the Dow Chemical Composites Educator of the Year by SPE and an honored Fellow of American Association for the Advancement of Science (AAAS). Dr. Zhong has had over 300 publications in polymer composites and energy materials, including 213 peer-reviewed papers, 2 books and 5 book chapters, more than 90 conference papers, and a number of US patents.

Photoluminescence studies of silica stabilized zirconia after CO_2 laser annealing for high temperature applications

Clara Goyes
Universidad Autónoma de Occidente,
Colombia

Clara Goyes is a scientific researcher at the Universidad Autónoma de Occidente in Cali, Colombia. Her scientific interest includes laser material interaction both for ceramic materials in extreme conditions as biomaterials scaffolds in bone regeneration. The main focus in her work are in spectroscopy properties and photonic usefulness of vitroceramic based materials.

SPEAKER SLOTS AVAILABLE

Ambient-processed hybrid organic-inorganic halide perovskites for efficient solar cells and photodetectors devices

Alain Pignolet
INRS - Centre Énergie Matériaux Télécommunications, Canada.

Dr. Alain Pignolet is Associate Professor and Director of the Ferroic Lab at INRS-Centre Enérgie Matériaux Télécommuications. With over hundred publications in peer-reviewed journals, several book chapters and over 2000 citations, Dr. Pignolet has been on the forefront of research into synthesis and characterization of thin films and nanostructures of advanced functional materials such as ferroelectric, ferroic, and multiferroic oxides. He also contributed to the advancement of piezoelectric force microscopy which enables imaging and characterization of the piezoelectric and ferroelectric properties at the nanoscale. Professor Pignolet's present research interests and ongoing activities include the growth and studies of epitaxial thin films and nanostructures ferroelectric, integrated photonics and energy production and storage.

Electrochemically Fabricated Substrate Dependent Smart Electrocatalysts Ni-Fe double and Ni-Co-Fe triple hydroxides for Efficient Water Splitting to Oxygen and Hydrogen

Shahed Khan
Duquesne University.
USA

Shahed khan has his expertise in the synthesis of materials for the electrochemical and photoelectrochemical splitting of water. He published more than 140 papers in various journals including some top ones such Journal of Physical Chemistry, Journal of American Chemical Society, Journal of Electrochemical Society, Chemical Physics, Applied Physics and Science. He co-authored books entitled "Quantum Electrochemistry", "Surface Electrochemistry" and co-edited volume 7 of "Comprehensive Treatise of Electrochemistry." The focus of his research is to synthesize highly stable energy materials based on naturally abundant sources for efficient splitting of water to oxygen and hydrogen, a clean fuel to have carbon footprint free society in the planet Earth.

Sustainability in production of cement composite boards using waste and supplementary cementitious materials

Morteza Khorami,
Coventry University, UK

Dr Morteza Khorami has his expertise in Civil engineering subjects include; structural behaviour of reinforced concrete elements, corrosion, application of waste materials in production of concrete and production of cement composite board using waste materials. Over the past 16-year, He has worked in academic activities including; Researcher, senior Researcher, Assistant lecturer, Head of Research Department, Assistant Professor, lecturer, and Senior lecturer in UK/Oman/Iran. He has over fifty publications from his scientific research including books, a patent, research reports, journal articles and international conferences. Currently, He is a lecturer at Coventry University.

SPEAKER SLOTS AVAILABLE

Material synthesis and optimization for high performance triboelectric nanogenerators

Jikui Luo
University of Bolton,
UK

Jack Luo received his PhD degree from the University of Hokkaido, Japan in 1989. He worked in Cardiff University as a research fellow, in Newport Wafer Fab. Ltd., Philips Semiconductor Co. and Cavendish Kinetics Ltd as an engineer, senior engineer and manager, and then in Cambridge University as a senior researcher from 2000. From January 2007, he became a Professor in MEMS at the Centre for Material Research and Innovation (CMRI), University of Bolton. His current research interests focus on sensors, actuators, flexible/wearable electronics and lab-on-chips for biotechnology and healthcare applications, and nanomaterials, nanodevices, energy harvesting technology, wireless sensors etc. He has over 230 publications in peer review international journals, and about 190 talks and presentations at international conferences, among them about 40 are invited talks or plenary/keynote speaks.

Sustainable development in green energies and the environment

Abdeen Omer
Energy Research Institute (ERI)
UK

Abdeen Mustafa Omer (BSc, MSc, PhD) is an Associate Researcher at Energy Research Institute (ERI). He obtained both his PhD degree in the Built Environment and Master of Philosophy degree in Renewable Energy Technologies from the University of Nottingham. He is qualified Mechanical Engineer with a proven track record within the water industry and renewable energy technologies. He has been graduated from University of El Menoufia, Egypt, BSc in Mechanical Engineering. His previous experience involved being a member of the research team at the National Council for Research/Energy Research Institute in Sudan and working director of research and development for National Water Equipment Manufacturing Co. Ltd., Sudan. He has been listed in the book WHO'S WHO in the World 2005, 2006, 2007 and 2010. He has published over 300 papers in peer-reviewed journals, 200 review articles, 7 books and 150 chapters in books.

DFT simulations applied to multiferroic materials

Sergio R. de Lazaro,
State University of Ponta,
Brazil

Sergio Ricardo de Lazaro has him expertise in DFT simulations applied in chemistry of materials in bulk and surface dimensions to improve electronic, magnetic and structural properties. He is professor in State University of Ponta Grossa since 2006, he created the chemical simulation group in department of Chemistry. He has participated as referee in many scientific journals and has 54 manuscripts published in reputed journals.

SPEAKER SLOTS AVAILABLE

Biography

Investigation of the $CuIn_{1-x}Al_xSe_2$ structure-properties relationships by coupling density functional and Bader's theories

Marie-Christine Record
Aix-Marseille University and CNRS, France

Marie-Christine Record is Full Professor of Materials Chemistry at the University of Aix-Marseille (France) since 2004. Her field of interest is solid-state chemistry both from the experimental and computational standpoints. Her experimental skills spread from the determination of phase diagrams and the synthesis of materials, by using methods as varied as mechanical alloying, Self-propagating High temperature Synthesis (SHS), reactive diffusion in thin films, and Electro Chemical Atomic Layer Epitaxy (EC-ALD), to materials structures (X-ray diffraction) and properties (electronic) characterization. For the purpose of better understanding the materials structure-properties relationships, she has developed for more than a decade computational strategies based on ab initio methods. She has been working on different kinds of materials such as intermetallics, chalcogenides for application purposes, especially for thermoelectric ones. She is author and co-author of more than 90 papers published in international scientific journals.

A framework for critically assessing the ideality of carrier-selective contacts for solar cells

Gabriel J. Man,
Uppsala University,
Sweden

Gabriel Man has worked as a postdoctoral researcher in the Division of Molecular and Condensed Matter Physics at Uppsala University since April 2018. In his current work, he applies and develops X-ray spectroscopic techniques to gain fundamental understanding of the relationships between the crystal and electronic structures of advanced energy materials. His work spans both fundamental and applied science, and is guided by his background in engineering and technology entrepreneurship. Prior to his postdoctoral appointment, Gabriel spent nearly a year working in industry as a device engineer/physicist at a thin film solar cell startup company. Gabriel received his Ph.D. in 2017 in Electrical Engineering and Materials Science from Princeton University (New Jersey, USA) under the supervision of Prof. Antoine Kahn. His Ph.D. research was partially supported by a prestigious Ph.D. fellowship from the Natural Sciences and Engineering Research Council of Canada (NSERC), and by a fellowship from Princeton University.

Ceramic-based thermoelectric materials processed by laser

Nuno Ferreira,
Universidade de Aveiro,
Portugal.

Nuno Ferreira, is a PhD in Physics Engineering (2014), currently is a researcher at i3N, Physics Department at University of Aveiro, Portugal. He had participated in several R&D projects on material science. He have experience researcher in study and development of ceramics-based materials, prepared through conventional methods (melting, solid stated), with particular focus on laser processing (crystal growth – LFZ and surface sintering/modification). Present sample characterization skills include various techniques such as, electrical conductivity and magnetic properties of various oxide materials. Current focus materials: thermoelectrics, ferroelectrics and glass matrices doped with transition metals and rare earth for energy storage and conversion applications.

SPEAKER SLOTS AVAILABLE

Magnetic instability in heavily n-doped Fe-based full-Heusler compounds: origin and impact on thermoelectric properties

Fabio Ricci
University of Liège,
Belgium

Fabio Ricci did his PhD on both simulations and experimental measurements on magnetic properties of materials (diluted magnetic semiconductors and soft magnetic materials) by means of the magneto-optical Kerr effect. Subsequently, he worked on theoretical simulations on Fe-based superconductors, principally iron-chalcogenides. He developed and implemented in the ABINIT code the formalism for the non-collinear magnetism in the density functional perturbation theory and, at the same time, started to work on the theoretical engineering of thermoelectric properties of the Fe-based full-Heusler compounds.

Performance of Dye Sensitized Solar Cells (DSSCs) based on Cu-doped TiO_2 nanostructures photoanodes.

Sara Chahid
Universidad de Cádiz,
Spain

Sara Chahid has her expertise in synthesis and characterization of semiconductors, with photovoltaic and photocatalytic applications. Her open and contextual evaluation of new semiconductors based on TiO_2 (Cu/ TiO_2, MoS_2/TiO_2 and Cu-MoS_2/TiO_2) creates new pathways for improving renewable energy.

Charge density distribution as a tool for understanding relationships between structure and properties of thermoelectrics

Pascal Boulet,
Aix-Marseille University,
France

Prof. Pascal Boulet earned his PhD thesis diploma from both the University of Lyon (France) and the University of Geneva (Switzerland) in 2001 under the supervision of Prof. H. Chermette and Prof. J. Weber. His PhD thesis was related to the Density-Functional Theory calculations on heterogeneous catalytic processes, photochemical processes in organic and organometallic species using Time-Dependent DFT and electron density-based chemical reactivity indexes. Pascal Boulet then moved to University College London (UK) in Prof. P. V. Coveney's group where he worked as a postdoctoral research fellow on clay-polymers nanocomposite materials using Monte Carlo and molecular dynamics simulations. From 2004 to 2017, he was associate professor at the University of Aix-Marseille (France) where he got a full professorship position in 2017. His field of interest mainly deals with transport properties in bulk and low-dimensional materials for energy applications (thermoelectricity and photovoltaics). He has published over 60 papers in renowned journals.

SPEAKER SLOTS AVAILABLE

Biography

Reactive plasma processes for formation of high-mobility IGZO thin-film transistors

Yuichi Setsuhara,
Osaka University,
Japan

Yuichi Setsuhara received his Dr. Eng. in Electrical Engineering from Osaka University in 1991. He joined Welding Research Institute, Osaka University as Research Associate in 1991, Department of Aeronautics and Astronautics, Graduate School of Engineering, Kyoto University as Associate Professor in 2001, and has been a professor in Joining and Welding Research Institute, Osaka University since 2004. He is currently a Vice Director of Joining and Welding Research Institute (JWRI), Osaka University since 2014. He has published more than 150 papers in SCI journals and has been serving as board members of several committees such as International Scientific Committee for International Conference on Plasma Surface Engineering and International Advisory Board for the journal "Plasma Processes and Polymers".

Synthesis of vertical graphene network as platform for electrochemical applications

Mineo Hiramatsu,
Meijo University,
Japan

Dr. Mineo Hiramatsu is a Full Professor of Department of Electrical and Electronic Engineering and the Director of Research Institute, Meijo University, Japan. He served as the Director of The Japan Society of Applied Physics. His main fields of research are plasma diagnostics and plasma processing for the synthesis of thin films and nanostructured materials. He served as chairman and member of organizing and scientific committees of international conferences on plasma chemistry and plasma processing. He was awarded the Japan Society of Applied Physics Fellow in 2017.

Studies of (Pb,La)(Zr,Sn,Ti)O_3 antiferroelectric single crystal with high electrocaloric effect

Qiang Li,
Tsinghua University,
China

Prof. Qiang Li graduated from Dept. of Material Science & Engineering, Shanghai Jiao Tong University in 1985, and received his Ph.D in the State Key Laboratory of Advanced Technology for Materials Synthesis and Processing, Wuhan University of Technology in 1993. He moved to the Department of Chemistry, Tsinghua University, as a full professor in materials chemistry, in 2000, from Wuhan University of Technology. His research interests were mainly focused on crystal materials & crystal growth, ferroelectric (anti-ferroelectric) materials and related functional materials etc.

SPEAKER SLOTS AVAILABLE

Biography

The strategies to improve the properties of Lithium ion batteries

Chuanbao Cao
Beijing Institute of Technology,
China.

Dr. Chuanbao Cao is currently the Chair Professor of School of Materials Science and Engineering, Director of Research Center of Materials Science of Beijing Institute of Technology. He received B.S (1983) degree in Chemistry from Nanjing University, M.S(1989) and PhD (1992) degrees in Materials Science from University of Science and Technology of China. He was a postdoctoral fellow in Fudan University (1992-1994). In 1994, he joined Beijing Institute of Technology. His current research focuses on the low dimensional materials synthesis and their energy application, .Until now, he was granted more than 40 patents, authored more than 320 peer-reviewed papers, cited by more than 7300 times.

Rational design of Pre-Intercalation electrodes for rechargeable battery

Liqiang Mai,
Wuhan University of Technology,
China

Liqiang Mai, Changjiang Scholar Chair Professor of Materials Physics and Chemistry, Distinguished Young Scholar of the National Science Fund of China, Dean for International Affairs of International School of Materials Science and Engineering at Wuhan University of Technology, fellow of the Royal Society of Chemistry. He received Ph.D. degree from WUT in 2004 and carried out postdoctoral research in Prof. Zhonglin Wang's group at Georgia Institute of Technology (2006-2007). He worked as an advanced research scholar in Prof. Charles M. Lieber's group at Harvard University (2008-2011) and Prof. Peidong Yang's group at University of California, Berkeley (2017).Prof. Liqiang Mai is mainly engaged in research field of nano energy materials and micro/nano devices. He has published over 300 papers tagged by SCI in leading journals. He is the guest editor of Adv. Mater., and serves on the Editorial and Advisory Boards of Joule (Cell press), Acc. Chem. Res., ACS Energy Lett., Adv. Electron. Mater., Nano Res. and Sci. China Mater.

Architecture and Interface Design for Ultrahigh Conductivity Graphene/Copper Composites

Ding-Bang Xiong
Shanghai Jiao Tong
University
China

Ding-Bang Xiong is an associate professor in the State Key Lab of Metal Matrix Composites, in Shanghai Jiao Tong University, China since 2012. He received his Ph.D degree in material physics and chemistry from Shanghai Institute of Ceramics in 2007. Between 2007-2010, he carried out his postdoctoral research as Alexander von Humboldt fellow in Marburg University, Germany, and between 2010-2012, he did collaboration research in Kyoto University supported by the Japan Society for the Promotion of Science. Her current research focuses on fabrication and properties of metal matrix composite materials.

SPEAKER SLOTS AVAILABLE

Discrete Zn, Co bimetallic sites supported on N doped carbon for high performance oxygen reduction reaction catalysis

Yufeng Zhao
Shanghai University,
China.

Dr. Yufeng Zhao is currently a professor in Yanshan University, vice-director of the Key Laboratory of Applied Chemistry in Hebei Province. She is also a review editor of Frontiers in Energy Storage, and the editor board member of Nano Advances. Dr. Zhao received her BS and MS degree in Materials Science and Engineering from Tianjin University, China, and her Ph.D. degree from Nanyang Technological University, Singapore. Afterwards, she worked in Deakin University, Australia and Phillips University Marburg, Germany as a research scientist. She joined Yanshan University since, and she was also a visiting professor in the NUANCE Center of Northwestern University. Her current research focuses on the development of advanced energy materials for supercapacitors, sodium-ion batteries and electrocatalysts, with particular interest in 2D transition metal compounds and nano-carbon materials. She has published over 80 peer-reviewed papers on international

Influence of aged sol and annealing temperature on the physical properties of super-hydrophobic TiO_2 thin films

Su-Shia Lin
National Chi Nan
University, Taiwan

Su-Shia Lin is Professor at Department of Applied Materials and Optoelectronic Engineering, National Chi Nan University, Taiwan. She has some research experiences in materials science. Her research work mainly focuses on electrical and optical films, optical memory and optical data storage, nanometer materials, and optical design.

Structural Modulation and Enhanced Thermoelectric Properties of Thermoelectric Thin Films

Ji-Yan Dai
Chongqing University,
China

Dai Jiyan is currently a Professor of the Department of Applied Physics at The Hong Kong Polytechnic University. Prof. Dai is a material scientist with main research interests include nanomaterials fabrication, structural characterization and application, especially functional oxide thin films and devices. His current research interest includes advanced thin film materials and thermoelectric materials. He has led a team to work on national 973 project in advanced acoustics materials for high-performance ultrasound transducers. He has also conducted two Hong Kong Innovative Technology Fund grants and is working on one ITF grant.

SPEAKER SLOTS AVAILABLE

Nanointerfacial Regions Enhanced by Gel Polymer Electrolyte-Accessible Electrodes for High-Performance Flexible Energy Storages

Eun Seok Song
Chonbuk national University, Korea (South)

Eun Seok Song is the master student of Chemical Engineering at Chonbuk National University. Mr. Song is working on the synthesis of ion-conducting polymers and the fabrication of solid-state electrolytes for energy storages such as rechargeable batteries and supercapacitors.

Three-Dimensionally Surface-Engineered Carbon Fiber Electrodes for Flexible and Wearable Micro-Supercapacitors

Jisu Kim
Chonbuk national university, Korea (South)

Jisu Kim is MS student of Chemical Engineering at Chonbuk National University. She is studying on the colloids and carbon nanomaterials for energy storages. Particularly, her research focuses on wearable and flexible micro-supercapacitors.

Semiconductor nanostructure engineering for solar hydrogen production

Akter Monny
The University of Queensland

Sabiha Akter Monny is a PhD student at the University of Queensland. She specialises in renewable energy, energy conversion, and nanomaterials. Her research focuses on developing photocatalysts using semiconductor nanomaterials for photoelectrochemical energy conversion.

SPEAKER SLOTS AVAILABLE

Biography

Superior Shuttling of lithium and sodium ions in manganese- doped titania @ functionalized multiwall carbon nanotubes anode

Syed Mustansar Abbas,
NCP

Syed Mustansar Abbas completed his doctorate degree from Quaid-i-Azam University, Islamabad, Pakistan and is currently working as a research scientist at National Centre for Physics, Pakistan. He has received Research and Productivity Award (RPA) twice from Pakistan Council of Science and Technology (PCST) and has been among the list of Productive Young Scientist of Pakistan. His area of research lies in the field of synthesis of various nanostructures, nanocomposites and their applications for energy storage and catalysis.

Magnesium ferrite/polyvinyl alcohol (PVA) nanocomposites: fabrication and characterization

Gulfam Nasar
Balochistan University of Information Technology

Gulfam Nasar currently works at BUITEMS, Quetta Pakistan as Assistant Professor. His research interests are mainly Material Chemistry, Polymer Chemistry and Nanotechnology. His current project is on 'polymer-ferrites nanocomposites'. Dr. Gulfam Nasar is a member of editorial boards of a number of research journals. He has presented his work in many international conferences around the world. He has published more than 20 publications in internationally reputed journals.

The ZnO based nanostructured anode materials for energy conversion applications @ LTSOFC

Ghazanfar Abbas,
Department of Physics,
COMSATS University.

Dr. Ghazanfar Abbas has completed his Ph.D. in 2013 in the field of Nanocomposite Materials for Energy Conversion Applications (Solid Oxide Fuel Cells). Currently, he is working as Assistant Professor in the Department of Physics, COMSATS University Islamabad, Lahore Campus, Lahore-54000, Pakistan and involved in teaching graduate undergraduate classes. I have joined Clean Energy Reseach Lab and orking in the field of fuel cell technology with nano-engineering technique. I have a professional skill to synthesize the materials by different techniques; solid state reaction, co-precipitation, sol-gel, wet-chemical root and auto-clave techniques and well known knowledge of XRD, EDX, SEM, TEM, and TGA analysis. I have been working to measure the electronic/ionic conductivities of the materials and fuel cell performance of three layers (anode/electrolyte/cathode) which includes the measurement of open circuit voltage (OCV), current density and power density at various temperature from 400-600^{o}C.

SPEAKER SLOTS AVAILABLE

Natural plants: An efficient inhibitors of mild steel corrosion in H_2SO_4 acid

Aisha H. Al-Moubaraki
Faculty of Sciences–Alfaisaliah Campus, University of Jeddah

Aisha H. Al-Moubaraki assistant professor of physical chemistry University of Jeddah KSA. Research interest in: Corrosion Behavior of Metals in Aqueous Solutions-Kinetic and Thermodynamic Studies, Corrosion Inhibition of Metals in Aqueous Solutions by some Organic and Natural Inhibitors. Corrosion Behavior of Metals in natural environments such as soils and seawater.

Novel heterostructured nanoporous silicon (HNPS) anode for lithium ion battery: economic prudence, system demonstration and first principle insights

Anil Pathak,
School of Minerals, Metallurgical and Materials Engineering

Anil Pathak is currently pursuing his PhD at Indian Institute of Technology, Bhubaneswar, India. His area of focus is energy storage technology, mainly lithium ion and metal air battery. His present thesis work deals with development of anode material and modification of electrolyte for high energy density lithium ion battery. Prior to PhD, he has developed electrochemical and first principle based model for lithium ion and metal air battery application. Here he has developed novel structured silicon material which has characterized and tested in lithium ion cell. Further he has patented this technology and is looking forward for its industrial usage.

The behavior of system temperature, volume, enthalpy, and total energy of ZnO wurtzite phase under different temperature and pressure, A molecular dynamics prediction.

Y. Chergui
IGEE Institute, University M'Hamad Bougara of Boumerdes

Yahia CHERGUI has completed his PhD from Badji Mokhtar University in Annaba, Algeria. He is a teacher in Boumerdes University since 2012. He has published more than 7 papers in reputed journals and has been serving as a referee with condensed matter journal (IOP) and Energy journal(Elsevier).He passed 6 months in Cardiff university and Queen University for summer school.

SPEAKER SLOTS AVAILABLE

Solar PV/T integrated Reversible Solid Oxide Fuel Cell System for Power Generation and Storage

Sudip Ghosh
Indian Institute of Engineering Science and Technology

Dr. Sudip Ghosh is an Associate Professor in the Department of Mechanical Engineering, Indian Institute of Engineering Science and Technology, Shibpur. He received his Bachelor of Engineering (Mechanical) from University of North Bengal, India, in 1991, Master of Engineering (Heat Power) from Calcutta University, in 1993 and Ph.D. from Jadavpur University in 2005. Besides having a two-decade long teaching and research experience, his career includes industrial work experience at ABB ABL, Durgapur, India (later taken over by Alstom Power). His areas of research include Clean Coal Technology, Renewable Energy Technologies like Fuel Cells, Biomass Gasification and Greenhouse Technology. He is closely associated with a few renewable energy research groups in Europe, USA and Canada and he has served as Guest Scientist at Paul Scherrer Institute (PSI), Switzerland (during 2006 and 2007), where his focus of work was development and technology demonstration of biomass gasification integrated fuel cell (SOFC) system.

Correlation between densification and ferromagnetic resonance of Rare-Earth substituted magnetic oxides

Alina Manzoor
The Islamia University of Bahawalpur

I am Alina Manzoor, working as Assistant Professor at Government College University Faisalabad, Pakistan. I have done my PhD in the field of nanomagnetism from The Islamia University of Bahawalpur, Pakistan. I have thirteen international publications from my research work in various international journals. I have just completed a research project as a guest researcher at Freie University Berlin, Germany with AG KUCH group in the department of experimental physics.

Semiconductor nanostructure engineering for solar hydrogen production

Akter Monny
The University of Queensland

Sabiha Akter Monny is a PhD student at the University of Queensland. She specialises in renewable energy, energy conversion, and nanomaterials. Her research focuses on developing photocatalysts using semiconductor nanomaterials for photoelectrochemical energy conversion.
