About Rome

Near the banks of the Tiber River, 2,700 years ago on seven hills, the foundation of Rome has been laid. It is one of the most ancient cities in Europe. Since then, it has been continuously inhabited and grew into a city of almost three million people, covering 1,502 sq.km(580 square miles). Rome is in southern Italy, in southern Europe, and has a parallel latitude with New York state. Located inland about 27 kilometers (17 miles) from the Tyrrhenian Sea, Rome is the capital city of Italy. Within Rome's enclave is Vatican City. The seat of the papacy of the Roman Catholic Church, Vatican City has been recognized as an independent state by the Italian government since 1929. Rome, the "eternal city", is so called because it is a place of great beauty, contrast and life. Rome is an ecletic city: the religious world centre of Catholic Church, the fabulous ruins of the centre of the Roman Empire, and modern, bustling Rome. According to tradition, Rome was founded in 753 B.C. on one of the Seven Hills, a term coined to describe the Capitoline, Quirinal, Viminal, Esquiline, Caelian, Aventine, and Palatine hills surrounding the old community. In Rome, speed limits are fixed at 50 kilometers (31 miles) per hour in urban areas, 110 kilometers (68 miles) per hour on main roads outside urban areas, 90 kilometers (56 miles) per hour on secondary and local roads, and 130 kilometers (81 miles) per hour on motorways.

In Italy, the prevalence of diabetes is 6.6% among people over 20 years old, The Italian Ministry of Health estimates that the number of total undiagnosed cases of diabetes is approximately 2 million. By 2013, the number of cases of both type 1 and type 2 are expected to rise to about 2.7 million and 4 million, respectively. Current diabetes incidence ranges from 4 to 10 new cases per 100,000 inhabitants annually throughout most of the country, but is as high as 35 new cases per 100,000 in Sardinia. Approximately 15,000 new cases of type 1 diabetes and 185,000 new cases of type 2 diabetes are diagnosed nationwide each year, resulting in a and a type 1:type 2 ratio of 1:9.
