City Attractions of Las Vegas

Fremont Street:

Fremont Street dates back to 1905, when Las Vegas itself was founded. Fremont Street was the first paved street in Las Vegas in 1925[1] and received the city's first traffic light in 1931.[2] Fremont Street also carried the shields of U.S. Route 93 (US 93), US 95, and US 466 before the construction of the interstates.

While gambling was well established prior to being legalized, the Northern Club in 1931 received one of the first 6 gambling licenses issued in Nevada and the first one for Fremont Street.

Hoover Dam

Hoover Dam, once known as Boulder Dam, is a concrete arch-gravity dam in the Black Canyon of the Colorado River, on the border between the U.S. states of Nevada and Arizona. It was constructed between 1931 and 1936 during the Great Depression and was dedicated on September 30, 1935, by President Franklin D. Roosevelt. Its construction was the result of a massive effort involving thousands of workers, and cost over one hundred lives. The dam was controversially named after President Herbert Hoover.

Bellagio

Bellagio is a resort, luxury hotel and casino on the Las Vegas Strip in Paradise, Nevada. It is owned and operated by MGM Resorts International and was built on the site of the demolished Dunes hotel and casino. Inspired by the Lake Como town of Bellagio in Italy, Bellagio is famed for its elegance. One of its most notable features is an 8-acre (3.2 ha) lake between the building and the Strip, which houses the Fountains of Bellagio, a large dancing water fountain synchronized to music.

City Attractions of Las Vegas

Pyramid Lake

A remnant of the Pleistocene Lake Lahontan (~890 feet deep), the lake area was inhabited by the 19th-century Paiute, who used the Tui chub and Lahontan cutthroat trout from the lake[3] (the former is now endangered and the latter is threatened). The lake was first mapped in 1844 by John C. Frémont, the American discoverer of the lake who also gave it its English title.

Valley of Fire State Park

The Valley of Fire derives its name from red sandstone formations, formed from great shifting sand dunes during the age of dinosaurs, 150 million years ago. Complex uplifting and faulting of the region, followed by extensive erosion, have created the present landscape.

Other important rock formations include limestones, shales, and conglomerates. Prehistoric users of the Valley of Fire included the Basket Maker people and later the Anasazi Pueblo farmers from the nearby fertile Moapa Valley.

Lake Mead

Lake Mead is the largest reservoir in the United States, measured by water capacity. It is on the Colorado River about 24 mi (39 km) from the Las Vegas Strip southeast of the city of Las Vegas, Nevada, in the states of Nevada and Arizona. Formed by the Hoover Dam, Lake Mead is 112 miles (180 km) long when the lake is full, has 759 miles (1,221 km) of shoreline, is 532 feet (162 m) at greatest depth, with a surface elevation of 1,221.4 feet (372.3 m) above sea level, and has 247 square miles (640 km2) of surface.
