About City

London is the capital and most populous city of England and the United Kingdom. Standing on the River Thames in the south east of the island of Great Britain, London has been a major settlement for two millennia. It was founded by the Romans, who named it Londinium. London's ancient core, the City of London, largely retains its 1.12-square-mile (2.9 km2) medieval boundaries. Since at least the 19th century, "London" has also referred to the metropolis around this core, historically split between Middlesex, Essex, Surrey, Kent, and Hertfordshire, which today largely makes up Greater London, governed by the Mayor of London and the London Assembly. Winters are generally cool, cloudy and damp with little temperature variation. Snowfall occurs occasionally and can cause travel disruption when this happens. Snowfall is more common in outer London. Spring and autumn are mixed seasons and can be pleasant. London's buildings are too diverse to be characterized by any particular architectural style, partly because of their varying ages. Many grand houses and public buildings, such as the National Gallery, are constructed from Portland stone. Some areas of the city, particularly those just west of the center, are characterized by white stucco or whitewashed buildings. The top 10 most visited attractions of London are The British Museum, The National Gallery, Natural History Museum, Southbank Centre, Tate Modern, Victoria and Albert Museum, Science Museum, Somerset House, National Portrait Gallery, Tower of London.
