Final Scientific Program will be updated soon…

About New Orleans, USA

New Orleans is a Louisiana city on the Mississippi River, near the Gulf of Mexico. Nicknamed the "Big Easy," it's known for its round-the-clock nightlife, vibrant live-music scene and spicy, singular cuisine reflecting its history as a melting pot of French, African and American cultures. Embodying its festive spirit is Mardi Gras, the late-winter carnival famed for raucous costumed parades and public partying. New Orleans, with its richly mottled old buildings, its sly, sophisticated - sometimes almost disreputable - air, and its Hispanic-Gallic traditions, has more the flavor of an old European capital than an American city. Townhouses in the French Quarter, with their courtyards and carriageways, are thought by some scholars to be related on a small scale to certain Parisian "hotels" - princely urban residences of the 17th and 18th centuries. Visitors particularly remember the decorative cast-iron balconies that cover many of these townhouses like ornamental filigree cages. New Orleans Mardi Gras may only happen once a year, but you can learn about and experience certain aspects of it year round!

The weather of Orleans is 61°F (16°C), Wind N at 10 mph (16 km/h), 88% Humidity. Facilities for recreation and relaxation in New Orleans are justly famous. New Orleans is often referred to as "the city that care forgot," and it has always been a town for those seeking a good time. Its residents love music, dancing, and a "Continental Sunday" spent in amusements. The three factors that have contributed to its popularity with tourists are the Old World charm of the Spanish-French architecture in its Vieux Carré (French: "Old Square"), the reckless abandon of its Carnival and Mardi Gras, and its reputation as the birthplace, between the 1880s and World War I, of jazz.
