The prophiloplasty in the XXI century

Gianpaolo Tartaro

Second University of Naples, Italy

Abstract

Dentofacial deformities are facial malformations present worldwide. Rehabilitation of these patients is challenging and requires important skills in plastic and maxillofacial surgery. Nowadays, as is well known, patients seek for quick and consistent results, so sugeons involved in this filed must be very confident with bone surgery, the use of facial implants, and soft tissues surgery.

Author in his career operated more than 500 patients affected by dentofacial deformities; in this lecture he will discuss and compare dentofacial deformity rehabilitation strategies reviewing the different approach used nowadays, and underlining how important is today the pre-operative evaluation, thanks to the newest facial morphing softwares.
