ABSTRACT

Title: Stable and lasting surgical rejuvenation of the lower orbital region

Vincenzo Eduardo Geraci, MD

Plastic and Aesthetic Surgeon.

This work concerns the rejuvenation of the lower orbital region.

For this area there are different types of treatment we will stick to consider the two fundamental treatments: Surgical and Infiltrative. For many years the approach to this region was exclusively by surgical procedure by the intervention of inferior blepharoplasty. Besides the undeniable positive results on the aesthetic improvement, it has been recorded as many times this technique has been accompanied by excessive removal of fat bags with the consequent penalizing appearance. In recent years many surgical techniques preferred to implement the remodelling of the bags and their repositioning, greatly reducing the effect of "emptying".

With the advent of Infiltrative technique with hyaluronic acid Gel, the rejuvenation of this area is no longer the exclusive competence of plastic surgeons and ophthalmologists, but finally there seems to be the possibility of a treatment accessible to all physicians. The correction by injection is practiced with the same substances used on other parts of the face, the suggested techniques are not enough coded.

The lower periorbital region is located is characterised by a dense network of anastomoses offering numerous complications. The procedure I intend to show, is a surgical method during which there is an alloplastic mesh positioning of predetermined dimensions. Among the advantages found: the dramatic reduction of the inferior orbital depression, which improves the typical effect of tired face.

Keywords: aesthetic improvement ; alloplastic mesh; orbital region; surgical procedure.

Vincenzo Eduardo Geraci, MD.

Plastic and Aesthetic Surgeon. Past Chief of plastic surgery department at the Milan State Hospital. Owner of private plastic surgery clinic in Treviglio-Italy. Medical Clinic in Milano – Via Montenapoleone 8. Teacher at Private University in Bergamo-Italy. Member of several national and international medical societies. Speaker at many conferences and congresses on aesthetic medicine and Plastic surgery.
