

How We Can Defeat All Influenza Viruses Simply and Easily

Mohamed Elkholy
Member of the Study Center of Medicines & Pharmaceutical, of Mansoura University, Egypt.

Where billions of people suffer with influenza and nearly 50,000 people die from its complications each year (as WHO reports), while it is so difficult to avoid influenza infection by staying away from crowded areas or by using masks, therefore; these tragedies situations sparked our attention to participate in the global efforts to offer an solution for facing these dangerous disease. Through our physical study we understand that the brain regulates the work of all cells of the body, as well as blood cells, by bundles of natural frequencies transmitted by the nervous system and nerve plexuses. When a flu virus infect any cell of nasal cavity and reaches its control center inside its nucleus, the virus vibration's will separate this cell from its usual work program (received from the brain).

Once the virus occupies and dominates the infected cell quickly turning it into a factory to produce similar viruses (or new viral strain, as a result of the overlapping of virus frequencies with brain frequencies). Then, the new viruses infiltrate other cells of nasal cave which repeated what happened in the previous cell. Within a few hours or days, thousands of cells will be destroyed as a result of the outflow of newborn viruses, and thus the influenza problems and its complications will occur, it can also be passed to other people. Where we realized that it is impossible to face influenza viruses with chemical drugs (in addition the harmful effects of chemical molecules on many organs of the body such as liver, kidneys, central nervous system, digestive system and respiratory system), And where vaccines transmit some genes of birds and pigs to humans (which have made people vulnerable to infect with new types of viruses), then it becomes necessary to search for a new approach.

Based on our belief that "**God** has created medicine for every disease", then we have been researching for that natural medicine along decades. Fortunately, we have found that desired medicine in the volatile oils of some medicinal herbs that containing a wide bundle of natural frequencies which become enough for damping and countering any influenza viruses staying inside the infected cells as soon its mixture touch the nasal cave. Through hundred trials (along 34 years) we have confirmed the success of our mixture (named "**LAZOCAM**") against about forty thousand cases of influenza in all ages among family, friends, and neighbors, grandchildren and even births from the first day. Logically; we can assure that our idea will allow humanity to conquer all kinds of influenza in easy and safe way with little cost.

Biography

Has completed his study in Egyptian military technical institute 1964 at the age of 20 years, taught electrical engineering at the same institute, studied at the Czech Military Academy 1969, and Banha Institute1971, Theoretical and practical studies for medicinal plants and natural medicines1976, studied the effective of natural frequencies against viruses1986 and patent2000, Founding member of Egyptian Society of medicinal plants "ISMAP"1987, Egyptian association for culture development1988, Al-Ahram science club1989, International federation for organic agriculture (IFOAM)1990, Egyptian association for combating smoking1999, Board member of the study center of medicines & pharmaceutical, Mansoura University2012, Five patents and 10 Scientific books.

Presenting author details
Full name: Mohamed Abdelgalil Abdalla El-kholy
Contact number: (+2) 01062023321
Email: info@easierphysics.com
Category: Oral presentation.
Session name:
Research interest: Prevention and Treatment of Influenza Viruses.
