Abstract

Nowadays, neuroscience is a crucial element for understanding psychiatric pathologies and essentially the famous Alzheimer.
On the other hand, neuroimmunology remains a discipline which presents many questions marks in matters of genetics and the direct relationship between this field and psychiatric pathologies.
For this, I begin a well-determined research methodology to find more relevant links between neuro-inflammation and Alzheimer as a phenomenon that is becoming more and more expanded in our sciences in terms of percentage of affection.
In addition, to go deeper into this research subject, it is necessary to make much targeted surveys for the blood markers of inflammation and to frame the results with a correlational study on a population with different age groups while taking into account consideration of the longer service life.

Professional Biography (100-150 words)

- I'm Mohamed TISS from Tunisia. Degree in emergency medicine and resuscitation and researcher in neurosciences at the faculty of medicine of Monastir Tunisia.
- Multi skilled and self motivated.
- An enthusiastic, hard working and competent career with an outgoing personality, great communication skills
