Dear Mr. Linus Kibira Ndonga,

Operation Time: 2021/10/29 2:27:14
Inquiry Number: 004917-2150655

=== Personal Information (1st author)
Registration Number: e460
Prefix: Mr.
Name: Linus_K. Ndonga
Country: Kenya
E-mail address: spastrategysystem@yahoo.com
Phone No.: +254721525425
Address: P. O. Box 79322-00200 City square
Affiliation No.: 1

=== Affiliation
Affiliation1: Strategic Poverty Alleviation Systems--SPAS

=== Authors
1. Prefix: Mr.
Name: Linus Kibira Ndonga

=== Abstract Information
Types of reports: activity report
Style of presentation: Oral presentation
Field of presentation (first choice): 5. Health crisis management (including measures to control pandemics and disasters)
Field of presentation (second choice): 17. International health
Title: Applying old wisdom anew to move healthcare systems for HIV and cancer from management to curative therapies for positive health.
Abstract:
*.*Background
Both cancer cells and HIV-infected cells harbour rogue genetic material that leads cells to grow uncontrollably (cancer) or to derange the immune system (HIV) which makes both of them hard to cure. Besides, in addition to being linked to an increased risk of cancer, HIV-infection is associated with an increased risk of dying from cancer.

Project purpose/Aims.
This project, started by Strategic Poverty Alleviation Systems--SPAS, (a-not-for profit, community-based organization) in 2003 aimed at using locally available resources to provide a cure for HIV and cancer (long considered "curses" or "death sentences" in rural-Africa), simultaneously.

Project description.
This project has reinvented traditional/indigenous foods and medicinal resources such as grain amaranth plant genetic resources and traditional healthcare systems and knowledge institutions as to engineer a paradigm shift to move healthcare systems for HIV and cancer from management treatment to curative therapies. Small-scale farmer-families grow grain amaranth for food/nutrition and income and surplus sold to SPAS for making Grain Amaranth--Based Nutraceuticals for community members with chronic diseases.

Outcomes
These nutraceuticals have previously been given to community members of all ages and gender with HIV (nowadays a chronic disease) and/or cancer (both AIDS and non-AIDS defining cancers) with spectacular results. Within seven days of taking grain amaranth--based nutraceuticals they're off all medications and within fourteen days, the virus is completely

eradicated from their bodies, including the HIV reservoirs. In the case of cancer, within fourteen days of taking these nutraceuticals, people attain complete remission; all the signs and symptoms of cancer disappear and cancer cells cannot be found by any tests.

Challenges.
Although for centuries cultures around the world have relied on traditional herbal medicine to control diseases, nowadays herbal medicine is not prescribed in major health outlets for chronic diseases and only half-heartedly rarely taught in medical schools.

Conclusion
Indeed, to accelerate progress towards curative therapies for and halt premature deaths from these diseases and achieve more than the 2030 Agenda on Sustainable Development by the UN--to end AIDS as a public health threat by 2030--substantial attitude change towards traditional healthcare systems and indigenous knowledge need be prioritized.
