Title : Dermatoglyphic biomarkers in mothers whose offspring completed suicide: A clue for screening out families at risk?

A clue for screening out families at risk?

Israel Oron
Psychologist

Biography

The term dermatoglyphics literally means skin carving. It is the scientific study of the skin configurations on the volar side of fingers, palms, toes, and soles, and a branch of physical anthropology, medicine, genetics, and psychobiology. Since the 1920s, numerous studies have reported that unusual and irregular dermatoglyphics are associated with specific medical and psychiatric conditions. The current dermatoglyphic study is in line with research searching for biological markers related to suicidal behavior. It was designed to focus on both parents whose offspring completed suicide since skin configurations are hereditary and completed suicide is influenced by genetic factors.

The Intellectual Property Rights of this project have been established by The LJMU Research and Innovation Services.

Title : President Emeritus Liverpool Architectural Society

Christina Soderberg
Royal Holloway,
University of London
Egham
UK

Abstract

Across different photographic images and cinematic shots, depth of field often changes. Yet, there is little research to date which indicates the impact on visual attention of these differing depths of field. To determine the impact of depth of field type blur effects on attention, participants were eye-tracked whilst completing a visual search task within a series of natural scene images. To simulate depth of field, one half of each image was randomly selected to be blurred using a Gaussian kernel at one of three levels of intensity, to approximate the effects of different depths of field. The total length of fixation duration per participant was found to be significantly longer on the in-focus portion of each image.

Title : When anything is likely to be momentarily relevant Gestalt Therapy and relational hysterical mode

Rosaria Lisi
Psychotherapist
Italy

Abstract

Rosaria Lisi has degrees in clinical psychology and religion. She is a psychotherapist and was formed at the Institute of Gestalt Therapy where she is now a teacher and a researcher. Elena Zakharova is a specialist in neurophysiology and neurochemistry. Using the original method of synaptic fractionation, she previously participated in studies that revealed a different cholinergic synaptic organization of cognitive functions in the brain of intact animals with different cognitive abilities (Mukhin et al., 2002). Under the leadership of MD Alexander Dudchenko (hypoxia, ischemia, biochemistry, molecular biology) and together with PhD Zinaida Storozheva (neurophysiology, neurodegenerative diseases, learning models) and PhD Mikhail Monakov (cerebral hypoperfusion, ischemia, surgery), she revealed a significant cholinergic reorganization of learning and memory under cerebral hypoperfusion in rats on the 2VO model (Zakharova et al., 2010)

Title: Chairman of the Academic Council of Koltzov Institute of Developmental Biology RAS

C. Girija Navaneedhan
Indian Institute of Technology
India

Biography

Dr C.Girija Navaneedhan is a Post-Doctoral fellow as well as an independent researcher in the department of Management studies, Indian Institute of Technology , Madras with 30 years of teaching experience in chemistry at School and College level. Completed M.Phil. Chemistry from Madras University, completed Ph.D. in interdisciplinary field involving Chemistry and Education from Madras university .

Title: Wiedemann-Steiner syndrome with a novel compound heterozygous mutation in KMT2A gene having intellectual disability and microcephaly in a consanguineous family

Muhammad Imran Naseer
Center of Excellence in Genomic Medicine Research, King Abdulaziz University

Biography

Dr. Muhammad Imran Naseer (Associate Professor) joined the CEGMR as a neuroscientist from Gyeongsang National University, South Korea. His area of expertise fall in molecular, cellular and developmental neuroscience. His PhD work was based on the effect of ethanol on siRNA-Mediated GABAB1 receptor expression for downstream signaling pathways, apoptotic neurodegeneration, maternal epileptic seizure and role of GABAB1 receptor expression in early development of pre and postnatal rat brain. Currently he is involved in neurogenetic research program at CEGMR working on common neurologic disorders including Progressive Myoclonic, Juvenile Myoclonic,Idiopathic Generalized Epilepsy.

Title: Antioxidants Attenuate Isolation- and L-DOPA-Induced Aggression in Mice

Sundas Hira Riphah
International University

Biography

Sundas Hira has her expertise in assessing the use or effectiveness of natural substances in neurodegenerative diseases. Her research work based on evaluating the effectiveness of antioxidants in treating the aggression explores the new pathways for preventing the many crimes in society. Social crime occurs due to the negative traits in personality such as aggression etc. This research probes the use of natural supplements in various disease resulting due to oxidative stress.

Title: Variable EM wavelenghts informs by neurons variable density base on special relativity theory can answer the questions about how life and intelligence and mind creates in brain

Mojtaba Omid Tabriz
University School of Veterinary Medicine

Biography

Mojtaba Omid has completed his doctor in veterinary medicine at the age of 26 years from Tabriz University in IRAN and now he is the USA resident. He want to pursue studing in mdcical schools in future and he is attended to too many conferences worldwide in neuroscience.

Title: The effectiveness of mild general hypothermia in reducing the side effects of delayed r-tPA treatment after embolic stroke in rats.

Atoosa Alibeigi
Rafsanjan physiopharmacology center

Biography

He is a second year medical student. He have recently started working as researcher in Rafsanjan physiopharmacology center. He am interested in neurodegenerative diseases. As a young researcher he learnt handling of animals and induction of ischemic stroke. In addition finding a way to increase tPA efficacy behind its therapeutic time window is my research focus.

Title : Short-term local hypothermia prevents ischemia-reperfusion injury

Mohammadreza Zarisfi
Rafsanjan physiopharmacology center

Biography

I completed my MD degree about 1 year ago, I have cooperated with physiology-pharmacology center of Rafanjan University since I was a student. I published 2 article meanwhile and I focus my attention to extending tPA therapeutic window by combination therapy with different methods such as hypothermia and post conditioning.

Title: Caffeine Prenatal Exposure Caused Persistent Alterations In Astrocyte Morphology In Experimental Models

Owolabi JO
Babcock University

Biography

Owolabi Joshua Oladele has his PhD in the Field of Anatomy and Neuroscience, with special research focus of toxicology and teratology associated with psychoactive substances. He also earns an MBA with specialisation in Clinical Research Management. He has more than 80 publications including articles in reputed journals and books.

Title: The Impact of Psychiatric Rehabilitation Program: The KEH Experiences

Nasir Mehmood
Clinical Psychologist &
Research Associate
Karwan E Hayat
Psychiatric Care &
Rehabilitation Center

Abstract

The People with psychiatric disability experience difficulties in their living, working, learning, and social environments. They have needs related to psychiatric treatment compliance, enhancing the skills of daily living, socialization, vocational training, and meaningful employment. Psychiatric Rehabilitation plays the important role to help them relearn skills that would reduce disabilities so that they can be reintegrated into society.

Title : Impact of Cellular Reminder on Follow up Patients Suffering from Psychosis: Randomized Controlled Trial

Nasir Mehmood
Clinical Psychologist
& Research Associate
Karwan E Hayat
Psychiatric Care &
Rehabilitation Center

Abstract

Many methods to remind patients about their appointments have been studied, including personal phone calls, automated phone calls and mailed letters. However, Mobile phones using the short message service (SMS) are now commonplace in both developed and developing countries Mobile phone messages have the advantage of being convenient, inexpensive and able to reach to the intended person immediately.

Title: Perceived Social Support Differences Among Schizophrenic And Depressed Patients In Rehabilitation Care

Yasirah Gohar
Clinical Psychologist
& Rehab In-charge
Karwan E Hayat
Psychiatric Care &
Rehabilitation Center

Biography

The present study aimed at analyzing the difference in the level of perceived social support among the psychiatric patients of schizophrenia and depression in rehabilitation care. The research hypothesized that there would be significant difference in the levels of social support among the patients of schizophrenia, and depression and that perceived social support plays major role among other treatments in the relapse. The patients of schizophrenia and depression were selected from Karachi, Islamabad and Lahore rehabilitation care units through purposive sampling to provide geographical diversity to the study to understand the difference in perceived social support by the cultural environment of the region.

Title: Impact of traumatic life events on cortical thickness

Srishti Goel
University of North Carolina, Chapel Hill

Abstract

Traumatic and stressful events experienced during childhood can have deleterious impact on mental health. One of the pathways through which such experiences could potentially impact mental health is through alterations in cortical development. Recent work in adolescents has highlighted the impact of early life events on cortical structure, consistent with this possibility. Interestingly, very little work has examined these same associations in young children. This study tests the association between traumatic life events and cortical thickness in a sample of children recruited into the Duke Preschool Anxiety Study.

Title : Scale-Up! A Novel Method to Study Reciprocal Real-Time Processes During Patient-Therapist Interactions

Peter Hilpert
University of Surrey
UK

Biography

Peter Hilpert develops next-generation methods to study social interactions. He using engineering method to extract behavior (mainly facial and vocal signals) in high temporal resolution (HTR), combines this with factors we already can extract in HTR (physiology, emotions) and uses advanced quantitative methods (e.g., dynamical systems modeling) to compute self-regulation and co-regulation processes.

Title: A new approach to biofeedback

Paolo Grigolini,

Institute of non-linear science
University of North Texas
USA

Biography

We show that the information transport from one to another complex system depends on crucial events, namely events that are renewal and occur at a distance from one another described by a waiting time distribution with an inverse power law structure. To meet the homeo-dynamics condition of biological processes we assume that physiological processes are characterized by periodicity, as well as by crucial events. Periodicity generates the misleading impression that resonance is the leading property for information transmission.

Title : Yoga: An ancient mind-body therapy for cardiovascular prevention and rehabilitation

Satish G Patil
Assistant Professor
Shri B.M.Patil Medical College
India

Biography

Dr Satish G. Patil is Assistant professor of Human Physiology in BLDE (Deemed to be University) Shri B. M. Patil Medical College, Hospital & Research Centre, India. He is Assistant Director of Central Research Laboratory of BLDE University, India. His field of research interest is “Integrative cardiovascular and yoga psychophysiology”. He has published about 21 papers in Medical journals of repute. He has contributed chapters for two books. He has presented research paper/talk in many scientific meetings such as AHA scientific meeting, Phoenix, USA; European Union Geriatric Medicine Society congress, Venice, Italy; Euro-India International conference, India; Tulane University, New Orleans, US

Title: Psychological impact of HIV/AIDS stigma among women of African origin in Germany: What can we learn from their stories?

Joyceline Ntoh Yuh
Doctoral Candidate
University of Oldenburg
Germany

Biography

Joyceline Ntoh Yuh, a Feminist and Doctoral candidate in the University of Oldenburg,Germany. She holds an MA in Women & Gender Studies from the ISS Erasmus University Netherlands. Her research interest includes HIV/AIDS related issues, Psychology,Gender, Sexual and Reproductive health. Since 2006 she took keen interest in the field of HIV/AIDS were she researched on the impact of HIV on Agriculture affecting mostly women with the UN FAO Gender unit(Italy), mainstreaming HIV policies in UNFFE Uganda,HIV stigma & child bearing in Africa and currently facilitates workshops with MA students in the area of Gender, Sexuality & HIV/AIDS.

Title: Cannabis Use and Male Sexual Health

Rany Shamloul
The Ottawa Hospital
Research Institute,
Ottawa, Canada

Abstract

Cannabis (marijuana) is the most widely used illicit drug globally. Given the prevalence of nonprescription illicit drug abuse, there is a growing interest in the study of its potential effects on all psychological and organic effects on male sexual health. Objective: In this review, we discuss the effects of cannabis on male sexual health.Methods and Main Outcome Measure. Critical review of scientific literature examining the impact of cannabis use on male sexual health.

Title : Psychotropics and sexual dysfunction.

Rany Shamloul
The Ottawa Hospital
Research Institute,
Ottawa, Canada

Biography

Sexual dysfunction (SD) is common in patients taking antipsychotics, and is the most bothersome symptom and adverse drug effect compromising treatment compliance. Mechanisms involved in psychotropics-induced SD are either largely unknown or poorly understood. The aim of this review is to present an updated analysis of SD associated with the use of psychotropic drugs in psychiatric patients. Contemporary evidence from available studies demonstrates that SD rates are drug-related rather than drug-class specific, and that these rates vary widely.
