Title: Chromosomal Q-heterochromatin Variability in Alcoholics and Drug Addicts

Abyt Ibraimov

National Center of Cardiology and Internal Medicine

Biography

Abyt Ibraimov has more than 40 years expertise in studying of human chromosomal Q-heterochromatin regions (Q-HRs) polymorphisms in norm and pathology. His first papers were published in 80th (Hum.Genet., 1982, 66:1-7; 62: 252-265). To-date, two types of heterochromatin are known: C- and Q-heterochromatin. There are several significant differences between them, including the fact that C-heterochromatin is encountered in chromosomes of all higher eukaryotes, while Q-heterochromatin is only present in man, the chimpanzee and gorilla. In his laboratory, these studies were developed in two directions: 1) possible role of different amounts of Q-HRs in human adaptation to different ecological zones; 2) in pathogenesis of certain purely human pathologies such as alcoholism, drug addicts, obesity and atherosclerosis.

Title: IMPLEMENTATION OF VTE PREVENTION PROGRAM IN HOSPITAL SETTING
