ABSTRACK

An increase in the portion of new energy can be done to reduce dependence. On fossil energy, encourage economic development and ensure national energy security. At this time, bioenergy utilization is needed and more extensive research is being carried out. Because bioenergy utilization as an alternative resource can create a better future for the world. As well as in the use of fluel oil, which come from biogas energy and so on. For the example, new portion of energy in Indonesia is just 6% in 2005, making Indonesia want to increase that portion to 31% in the next 2030. Very affordable bioenergy utilization and clean, make it related with Sustainable Development Goals (SDG) no.7 in Affordable and clean energy. Which could shape the development of the world for the better future and reduce the level of damage on the earth. As a result of evil substances that has become rampant and eliminate poverty.

Keywords : Bioenergy, The Development of the World, Alternative Resource, Energy in Indonesia.
