Title: Third Millennium Cyber Security

Dr. Eduard Babulak

Abstract

The use of Internet today, has become essential for most of the people and somehow contributes to a make life more convenient with easy access and sharing of information at any time, from anywhere with anyone. In some way Internet brought positive as well as negative impacts. Given the ubiquitous connectivity and easy access to Internet, number of financial, government and industrial organizations were subject to security attack(s) from various sources. These events have made big impact on cybersecurity awareness not only for the industrial, business, and government organizations. Cyberspace is often understood as everything related to Internet and computer communications infrastructures. Given the current statistics the Cybersecurity issues are becoming very critical to any organization worldwide. The paper discusses cybersecurity issues and challenges for the Third Millennium. Many countries are developing strategies and policies on how to prevent and avoid any possible cyberattacks and its negative impact on nation's security and its economic wealth.

Biography:

Professor Eduard Babulak, is accomplished international scholar, researcher, consultant, educator, professional engineer and polyglot. His research was successfully published and presented worldwide. He was Invited Speaker at University of Cambridge, MIT, Purdue, Penn State, Yokohama National University, University of Electro Communications in Tokyo and other prestigious academic institutions worldwide. He serves as Editor-in-Chief, Associate Editor-in-Chief, Co-Editor, and Guest-Editor and Reviewer for number of peer reviewed Journals. He communicates in 16 languages and his biography was cited in the Cambridge Blue Book, Cambridge Index of Biographies, Stanford Who's Who, and number of issues of Who's Who in the World and America.

Research Interest: Cyber Security, Computer Networks, Future Internet, Applied Informatics, ICT & eServices and Smart Cyberspace.
