Heart transplantation: Our Achievement.

Our team offers a state of the art heart transplant service at the Hospital Angelina Caron. It is located in Campina Grande do Sul, Paraná State, in the southern region of Brazil. The service is offered by the Public Health System. Thanks to the joint effort of our multidisciplinary team, Hospital Administration and Transplant Center leadership, today we are a reference in Cardiac Surgery and Transplants. It has started in 2002 and the number of patients benefited by the service has exponentially grown over the years. The unfortunate lack of Government investment and competent authorities inattention for the use of assistive devices transforms the heart transplant in the ultimate resource for the treatment of heart failure. In our service, we serve, we follow, we indicate and classify patients candidates for heart transplant. Immediate survival approaches 78% with 63% at first year. Even with all the difficulties, especially in a country where there is systematic corruption diverting resources from the health system, we are able to keep heart transplant as a reality for those who need.

2008-2017 / Hospital Angelina Caron

Dr Ricardo Schneider
Total: 76 heart transplants

Survival

Survival	
Immediate	77,64%
1 month	72,37%
3 months	68,43%
6 months	64,48%
1 year	63,16%
2 years	57,9%
3 years	53,95%
4 years	53,95%
5 years	51,32%
