## Abstract:

Coronavirus disease (COVID-19) is an infectious disease. In this study, we report a 28-year-old pregnant woman who had a postpartum seizure with a background of HELLP syndrome and a proven COVID-19 infection. Her child survived, and at 12-week postpartum, all maternal COVID-19–related symptoms vanished, and she was cured.

## Biography

Masoumeh Farahani is a Gynecologist, Assistant Professor of Alborz University of medical sciences,department of obstetrics and gynecologists,Alborz university of medical sciences, karaj,Iran

**About Research Topic**

The study discusses a pregnant woman with postpartum seizure with HELLP syndrome and a COVID-19 infection. We suspect that COVID-19 infection in this patient mimics preeclampsia, which progressed to HELLP syndrome and was the possible cause of seizures.

**About Institution:**

Alborz University of Medical Sciences (ABZUMS) is a medical school in Alborz Province of Iran.Located in the city of Karaj, the university was established in 2010.The university offers degrees in 7 schools including residencies and fellowships, and administers all major hospitals and clinics throughout the Karaj city and province of Alborz
